INITIAL RUNNING

Finally trial running by starting with a small gear ratio for 2-3 minutes, measure the temperatures of both ESC & Motor. If both temperatures are close with each other, they are at good match. The gear ratio is then properly adjusted to optimum according to the features of the courser. However, it's very important to always keep both temperatures under 100°C, while adjusting the gear ratio. Otherwise the damage of the motor will happen, the motor efficiency will drop dramatically & the temperature will be raised up very quickly. Most battery energy is converted to heat, resulting in motor efficiency.

It's acceptable to replace a higher gear ratio or a higher KV motor while the temperature of the ESC is under 80°C. Unless the KV value of the original motor is very low enough, it should replace a motor with lower KV value when the input battery voltage is changed to a higher level. The ESC will be burnt if the motor doesn't properly changed while input voltage is changed.

INSTALLATION & CONNECTION

Install the ESC according to the diagram shown below.

BRUSHLESS MOTOR WIRING DIAGRAM

Switch on the transmitter. Lift the car with the 4 wheels on touching and turn on the ESC power. Right after turn on the power of the ESC, you will hear a multiple sound indicating the ESC is starting work and auto-setting the throttle neutral. When succeed in setting neutral, it will then be denied by another confirmation sound. If it is failed setting neutral, there will be no any confirmation sound. This ESC is applicable to the transmitter with the setting of 50% throttle, 90% throttle reverse or 100% 50%.

Adjust & make sure the Throttle forward direction coincides with the ESC forward direction. Assume the car with 4 wheels lifted on touching. Push the throttle trigger forwards to start motor running, push the throttle trigger backwards & hold it. If the system keeps braking, the throttle forward direction coincides with the ESC forward direction. Otherwise, if the system only has a brief braking then driving reversely, the throttle and ESC forward directions do not coincide with each other. Change the throttle reversing switch of the transmitter, release the throttle switch, turn off & then turn on the ESC power again. After auto-set neutral & push the throttle trigger forwards the car should also drive forward & the non-coincidence is corrected. If not, changing any two of the motor wires will correct the non-coincidence problem.

Motor rotating direction - Slowly apply throttle to check if the motor is rotating in the correct direction you desired.

You may need to swap the any two motor wires to get the wheels to spin in right directions.
