Student Exploration: Mouse Genetics (One Trait)

Vocabulary: allele, DNA, dominant allele, gene, genotype, heterozygous, homozygous, hybrid, inheritance, phenotype, Punnett square, recessive allele, trait

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

1. The image shows a single litter of kittens. How are they similar to one another? They all have spots, though they are different spots. They have the same type of fur and the size of their ears is about the same size. And also they are all just so cute! ☺

2. How do they differ from one another? They differ from each other because they have different color of spots and size of spots. They have a few visible differences but they also have differences that cannot be seen only by the eyes. Like their personalities. All of the kittens have different kinds of personalities.
3. What do you think their parents looked like? Their parents probably look similar to their kittens, they might have had spots and they are from the same cat family.

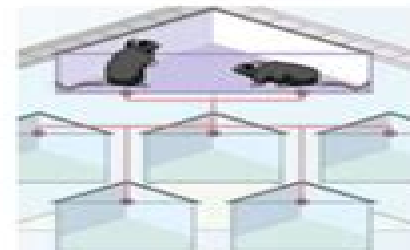

Gizmo Warm-up

The rules of **inheritance** were discovered in the 19th century by Gregor Mendel. With the *Mouse Genetics (One Trait)* Gizmo™, you will study how one **trait**, or feature, is inherited.

1. Drag two black mice into the **Parent 1** and **Parent 2** boxes. Click **Breed** several times. What do the offspring look like?

All the babies are with dark fur colors, no whites. Because black is a dominant color, so it produces black.

The appearance of each mouse is also called its **phenotype**.

Benest, Salem Chouaib, Lisa Derosa, Domenico Ribatti, 2022-11-15 **Epithelial Anion Transport in Health and Disease** Derek J. Chadwick, Jamie A. Goode, 2006-07-11 Cl absorption and HCO₃ secretion are intimately associated processes vital to epithelial function itself a key physiological activity Until recently the transporters responsible remained obscure but a breakthrough occurred with the discovery of the SLC26 transporters family It is now clear that the SLC26 transporters have broad physiological functions since mutations in several members are linked to a variety of diseases This book describes the properties of this family in detail with contributions from the leading global researchers in the field Complementary views from experts on other ion channels are offered in the discussions which make fascinating reading This

family consists of at least 10 genes each of which has several splice variants Most members of the family are expressed in the luminal membrane of epithelial cells Characterization of anion transport by three members has revealed that all function as Cl HCO₃ exchangers suggesting that SLC26 transporters are responsible for the luminal Cl HCO₃ exchange activity The SLC26 transporters are activated by the CF transmembrane conductance regulator and activate it in turn leading to a model in which these molecules act together to mediate epithelial Cl absorption and HCO₃ secretion The book includes chapters on the transport of other molecules by the SLC26 family including oxalate in the kidney and sugars in cochlear hair cells amongst others It also describes recent discoveries that most SLC26 transporters bind to scaffold proteins and that they all contain a conserved domain predicted to participate in protein protein interactions These suggest the SLC26 transporters exist in complexes with other Cl and HCO₃ transporters and possibly other regulatory proteins This book explores the functional role of these interactions leading to better understanding of transepithelial fluid and electrolyte secretion and the diseases associated with it
