## Lesson 1. Biochemistry: An Introduction

### LESSON OUTCOMES:

At the end of the lesson, you should be able to:

- familiarize yourself with the subject;
- have an idea about the different macromolecules;
- define monomers and polymers; and
- recall past ideas and learnings on matter and cells.

### Biochemistry: What is it?

- Biochemistry is also called Biological Chemistry, and it is a combination (amalgam) from two root words: "bio" and "chemistry".
  - "bio" comes from the Greek word *bios* which means life.
  - "chemistry" comes from the Greek word *chemieia* which means to cast together.

Based on these, we can define biochemistry as the study of the chemical processes in living organisms.

- **Biochemistry** teaches us how the biological molecules like carbohydrates, proteins, lipids, and nucleic acids give rise to the multitudes of chemical processes in the living cell, which in turn gives rise to the complexity of life.
- Biochemistry in broad terms is the study of the chemical composition of the living matter and the biochemical processes that underlie life activities during growth and maintenance. (Singh, 2004)
- Biology is the study of living things. The father of biology is Aristotle.
- There is no universally agreed upon Father of Chemistry, but there are two known scientists heralded as the father of Chemistry: Jabir Ibn Hayyan as the "Father of Early/Arabic Chemistry" while Antoine Lavoisier is known as the "Father of Modern Chemistry".
- The term biochemistry was first introduced to us by a German scientist named Carl Neuberg in 1903. He is referred to as the "Father of modern Biochemistry".

### Biochemistry: The Basics

- Monomers and polymers are the structural basis in which the four main macromolecules of biochemistry are based on.
  - Monomers are smaller micro molecules that are put together to make macromolecules.
  - Polymers are combination of two or more monomers that are synthesized through a process called *dehydration synthesis*.
- The large molecules necessary for life that are built from smaller organic molecules are called **biological macromolecules** or **biomolecules**. Biological macromolecules are organic, meaning that they contain carbon (with some exceptions, like carbon dioxide). In addition, they may contain hydrogen, oxygen, nitrogen, phosphorus, sulfur, and additional minor elements.
- There are four major classes of biomolecules: **(mnemonic is CeLiPhoNe or CLPN)**
  - Carbohydrates
  - Lipids
  - Proteins
  - Nucleic Acids

**Cases on Informal Learning for Science and Mathematics Education** Sun, Li,Lin, Cheng-Yao,2025-04-17 Many educators face the challenge of engaging students in science and mathematics often struggling to bridge the gap between theoretical concepts taught in classrooms and their real world applications This disconnect can lead to disinterest and disengagement among students hindering their learning outcomes Cases on Informal Learning for Science and Mathematics Education offers a solution to this problem by showcasing how informal learning experiences can significantly enhance students understanding and engagement in these subjects This book demonstrates the potential of informal learning to support and complement formal classroom instruction by presenting a rich collection of case studies It highlights how activities such as cooking budgeting visiting museums and participating in after school math clubs can serve as valuable informal learning experiences that deepen students understanding of science and mathematics concepts The book also addresses the challenge of recognizing the value of informal knowledge in problem solving offering insights and strategies for educators to help students leverage their informal learning experiences      *Catalog of Copyright Entries. Davies,2008-06-06 In December 2005 I changed my mind 1 Up until that time I had put my name on one case history in 400 publications 2 I changed my mind and realized that reading case histories could be a good learning exercise I had previously considered useful case histories to be essentially live case demonstrations Indeed I had persuaded years of endocrine clinical fellows that writing case histories was

not something to be encouraged But the cheese moved Livecase history presentations became too complex for easy digestibility The many investigations and vast literature review required more contemplation than a live presentation had required in the past And writing these exercises as a formal case history allowed the complex literature to be better understood Furthermore as our evidence base has grown the idiosyncratic approach so common in live case demonstrations of the past has become totally unacceptable The written or prepared case has become the ideal forum for demonstrating how to manage a medical case to the greatest benefit of the patient Indeed written case histories are clearly the very best means of showing medical care guidelines in real practice and of revealing their advantages and disadvantages 3 That does not mean we should no longer give live case demonstrations Demonstrating a supportive and knowledgeable patient can be a magnificent teaching tool For many years I have presented endocrinology cases to our first year medical students and for many years these physicians later told me how much they enjoyed them and that they remember them well So clearly both formats of delivery remain effective
