Materials and Contact Characterisation X S. Hernández ,J. De Hosson,D.O. Northwood,2021-09-01 With the aim to facilitate the dissemination of research from both academia and the industrial community presented works from the 10th International Conference on Computational Methods and Experiments in Material and Contact Characterisation are included in this book These papers discuss the latest developments in this rapidly advancing field The demand for high quality production for both industry and consumers has led to rapid developments in materials science and engineering This requires the characterisation of the properties of the materials Of particular interest to industry and society are the knowledge of the surface treatment and contact mechanics of these materials to determine the in service behaviour of components subject to contact conditions Modern society requires systems that operate at conditions that use resources effectively In terms of components durability the understanding of surface engineering wear frictional and lubrication dynamics has never been so important Current research is focused on modifications technologies that can increase the surface durability of materials The characteristics of the system reveal which surface engineering methods should be chosen and as a consequence it is essential to study the combination of surface treatment and contact mechanics Combinations of different experimental techniques as well as computer simulation methods are essential to achieve a proper analysis A very wide range of materials starting with metals through polymers and semiconductors to composites necessitates a whole spectrum of characteristic experimental techniques and research methods Topics covered include Experimental and measurement techniques Mechanical testing and characterisation Composites Characterisation at multiple scales Corrosion and erosion Damage fatigue and fracture Recycled and reclaimed materials Emerging materials and processing technology Materials for energy systems Contact mechanics Coatings and surface treatments Tribology and design Biomechanical characterisation and applications Residual stresses Polymers and plastics Computational methods and simulation Biological materials Evaluation and material processing **High Performance and Optimum Design of Structures and Materials III** W. P. De Wilde,S. Hernandez,S. Kravanja,2018-12-03 Papers presented at the 2018 International Conference on High Performance and Optimum Design of Structures and Materials are contained in this volume These papers address issues

involving advanced types of structures particularly those based on new concepts or new materials and their system design. The use of novel materials and new structural concepts nowadays is not restricted to highly technical areas like aerospace, aeronautical applications or the automotive industry but affects all engineering fields including those such as civil engineering and architecture. Most high performance structures require the development of a generation of new materials which can more easily resist a range of external stimuli or react in a non conventional manner. Particular emphasis is placed on intelligent structures and materials as well as the application of computational methods for their modelling, control and management. Optimisation problems discussed in this book involve those related to size, shape and topology of structures and materials. Optimisation techniques have much to offer to those involved in the design of new industrial products. The development of new algorithms and the appearance of powerful commercial computer codes with easy to use graphical interfaces has created a fertile field for the incorporation of optimisation in the design process in all engineering disciplines. The latest developments in design optimisation, manufacturing and experimentation are highlighted in this book.
