Juvenile Sex Offender Assessment Protocol-II (J-SOAP-II) Manual Office of Juvenile Justice and Delinquency, U.S. Department of Justice Office of, 2025-05-22 Presents an instrument for assessing risk factors in boys ages 12-18 who have been adjudicated for sexual offenses or who have a history of sexually coercive behavior. The instrument comprises 28 checklist items arranged in 2 static risk factor assessment scales: sexual drive preoccupation and impulsive antisocial behavior, and 2 dynamic risk factor assessment scales: intervention and community stability adjustment. The manual, which may be useful for informing and guiding treatment and risk management decisions for juvenile sex offenders, provides scoring instructions and forms, describes the development and validation of the instrument, and answers frequently asked questions. Juvenile Sex Offender Assessment Protocol-II (J-SOAP-II) Manual U.S. Department of Justice, 2019-03-17 The Juvenile Sex Offender Assessment Protocol II J SOAP II is a checklist whose purpose is to aid in the systematic review of risk factors that have been identified in the professional literature as being associated with sexual and criminal offending. It is designed to be used with boys in the age range of 12 to 18 who have been adjudicated for sexual offenses as well as nonadjudicated youths with a history of sexually coercive behavior. Decisions about reoffense risk should not be based exclusively on the results from J SOAP II. J SOAP II should always be used as part of a comprehensive risk assessment. Like any scale that is intended to assess risk, J SOAP II requires ongoing validation and possible revision as we learn more about how J SOAP II works and about how best to assess the risk of youths who have sexually offended. Because the revised J SOAP is a new scale and we are just beginning to collect predictive validity data on it.

Bromberg, William T.

O'Donohue, 2013-01-28 Adolescent and child sexuality is studied by developmental psychologists from a research perspective and is of interest to forensic psychologists dealing with abuse and custody issues as well as rape cases In many cases it is of interest whether the child in question was sexually active to understand the extent to which an underage minor might have voluntarily participated in sexual activity as opposed to having been coerced Previously researchers interested in the applications of their research needed to look to separate books and forensic specialists needed to look to development books to find the information they may have needed This handbook provides both audiences with the related information they need Encompasses normative behavior and clinical disorders in one source Applies the information on development and behavior to forensic issues Provides treatment information on sexual disorders in children Provides information on children and adolescents in one volume **Disruptive Behavior** Hans Steiner, Whitney Daniels, Christina Stadler, Michael Kelly, 2017

Introduction to disruptive behavior disorders Taxonomy classification diagnosis of disruptive behavior disorders Epidemiology of disruptive behavior disorders Etiology of disruptive behavior disorders Comprehensive and integrated treatment Disruptive behavior forensic implications **Reforming Juvenile Justice** National Research Council, Division of Behavioral and Social Sciences and Education, Committee on Law and Justice, Committee on Assessing Juvenile Justice Reform, 2013-06-22 Adolescence is a distinct yet transient period of development between childhood and adulthood characterized by increased experimentation and risk taking a tendency to discount long term consequences and heightened sensitivity to peers and other social influences A key function of adolescence is developing an integrated sense of self including individualization separation from parents and personal identity Experimentation and novelty seeking behavior such as alcohol and drug use unsafe sex and reckless driving are thought to serve a number of adaptive functions despite their risks Research indicates that for most youth the period of risky experimentation does not extend beyond adolescence ceasing as identity becomes settled with maturity Much adolescent involvement in criminal activity is part of the normal developmental process of identity formation and most adolescents will mature out of these tendencies Evidence of significant changes in brain structure and function during adolescence strongly suggests that these cognitive tendencies characteristic of adolescents are associated with biological immaturity of the brain and with an imbalance among developing brain systems

This imbalance model implies dual systems one involved in cognitive and behavioral control and one involved in socio emotional processes Accordingly adolescents lack mature capacity for self regulations because the brain system that influences pleasure seeking and emotional reactivity develops more rapidly than the brain system that supports self control This knowledge of adolescent development has underscored important differences between adults and adolescents with direct bearing on the design and operation of the justice system raising doubts about the core assumptions driving the criminalization of juvenile justice policy in the late decades of the 20th century It was in this context that the Office of Juvenile Justice and Delinquency Prevention OJJDP asked the National Research Council to convene a committee to conduct a study of juvenile justice reform The goal of Reforming Juvenile Justice A Developmental Approach was to review recent advances in behavioral and neuroscience research and draw out the implications of this knowledge for juvenile justice reform to assess the new generation of reform activities occurring in the United States and to assess the performance of OJJDP in carrying out its statutory mission as well as its potential role in supporting scientifically based reform efforts
