The Combination of Data-Driven Machine Learning Approaches and Prior Knowledge for Robust Medical Image Processing and Analysis Jinming Duan, Chen Qin, Gongning Luo, Diwei Zhou, 2024-06-11 With the availability of big image datasets and state of the art computing hardware data driven machine learning approaches particularly deep learning have been used in numerous medical image CT scans MRI PET SPECT etc computing tasks ranging from image reconstruction super resolution segmentation registration all the way to disease classification and survival prediction However training such high precision approaches often require large amounts of data to be collected and labelled and high capacity graphics processing units GPUs installed which are resource intensive and hence not always practical Other hurdles such as the generalization ability to unseen new data and difficulty to interpret and explain can prevent their deployment to those clinical applications which deem such abilities imperative

Functional Imaging and Modeling of the Heart Alejandro F. Frangi, Petia I. Radeva, Andres Santos, Monica Hernandez, 2005-06-13

The 1st and 2nd International Conferences on Functional Imaging and Modelling of the Heart FIMH were held in Helsinki Finland in November 2001 and in Lyon France in June 2003 These meetings were born through a fruitful scientific collaboration between France and Finland that outreached to other groups and led to the start of this biennial event The FIMH conference was the first attempt to agglutinate researchers from several complementary but often isolated fields cardiac imaging signal and image processing applied mathematics and physics biomedical engineering and computer science cardiology radiology biology and physiology In the first two editions the conference received an enthusiastic acceptance by experts of all these communities FIMH was originally started as a European event and has increasingly attracted more and more people from the US and Asia This edition of FIMH received the largest number of submissions so far with a result of 47 papers being accepted as either oral presentations or posters There were a number of submissions from non EU institutions which confirms the growing

interest in this series of meetings All papers were reviewed by up to four reviewers The accepted contributions were organized into 8 oral sessions and 3 poster sessions complemented by a number of invited talks This year we tried to allocate as many papers as possible as oral presentations to facilitate more active participation and to stimulate multidisciplinary discussions

Ventricular Mechanics in Congenital Heart Disease Giovanni Biglino, Adelaide de Vecchi, 2017-08-29 Looking at Horse in Motion the iconic photograph by E Muybridge it is almost possible to hear the horse galloping The pounding sound of the hoofs hitting the ground like a drum can also echo the rhythmic beating of the human heart That sound that visceral rhythm reminds us of the link between motion and performance the perfectly executed stride of the horse the incredible coordination of multiscale phenomena behind a heart beat Furthermore the decomposed sequence in Muybridge's

photograph has become a well known example of breaking motion into its components over time and as such is reminiscent of those images that are routinely acquired in clinical practice where the heart appears dilating and shrinking in a sequence of snapshots. The investigation of this motion and its subtleties is essential for refining our understanding of cardiac function and the appreciation of how and when this motion is no longer perfectly executed can lead us to understand functional impairments and provide insight into the unfolding of pathology. In the presence of congenital heart disease (CHD) cardiac mechanics are altered from single ventricle physiology to conduction abnormalities to different cardiomyopathies; it is important to both capture and interpret biomechanical changes that occur in the presence of a congenital defect. This special issue in *Frontiers in Pediatrics* now an e-book focuses on Ventricular mechanics in congenital heart disease and looks at current knowledge of phenomena such as systolic diastolic dysfunction and current methods chiefly in cardiovascular magnetic resonance imaging and echocardiography to evaluate cardiac function in the presence of CHD and then presents a series of original studies that employ both medical imaging and computational modelling techniques to study specific CHD scenarios.
