Planetary Accounting Kate Meyer,Peter Newman,2020-03-10 This book presents a novel way to enable people regardless of their scale of influence to take responsibility for global environmental problems including climate change It introduces a new framework called Planetary Accounting which allows the Planetary Boundaries non negotiable limits for the environment to be translated into limits for human activity It shows how such limits can be broken down into chunks that can be managed at different levels from individual and community to business and sector levels to cities and regions and at any level of government The book begins by summarising the science of climate change and introducing the notion of the Anthropocene the human age It highlights the importance of returning to and remaining within the Planetary Boundaries but shows that we can t realistically do so unless we have a new approach to environmental accounting The book then outlines how Planetary Accounting furnishes this new approach by combining sustainability science change theory and environmental accounting to create a scalable

framework for environmental management that encourages systemic and individual change The details of the science of and our human contribution to ten critical human pressures are then presented and the book concludes with a guide for those seeking to apply Planetary Accounting in practice Planetary Accounting could form the scientific underpinning of behaviour change programs guide the development of policy and regulations and provide both the basis for environmental laws and the foundation of future global environmental agreements It has been 50 years since the first views from space showed a blue planet alone in our solar system This book is an historic opportunity to provide humanity for the first time with sufficient information to begin implementing Planetary Accounting **Global Climate Change and Human Life** M. A. K.

Khalil,2022-06-02 In our time the global population has become large enough to cause perceptible environmental changes all over the world With it a new science of global change has emerged mostly as a practical matter to understand and manage the earth s habitability and create a sustainable environment for some time to come one which balances the benefits of technological and societal advances with their potential less desirable side effects These concerns began with the depletion of the ozone layer and its possible adverse consequences on human health and have in recent decades shifted to climate change driven by ongoing global warming Why are these global changes occurring How will they affect our lives If we find the effects undesirable what should we do This book will attempt to answer these questions It will show how to accomplish the goal of managing our climate what it will take and when it needs to be done Such a management process has to be dynamic making it more complex and less didactic requiring changes in strategy to achieve a longer term goal as our knowledge advances Global Climate Change and Human Life is a comprehensive and cohesive look at the emerging field of global change science Using models that take the theoretical or conceptual understanding and translate them into mathematical forms the book lays out a holistic view of the science that develops and teaches the main principles concepts and conclusions In the end readers will be empowered to use science and the scientific method to decide how important and timely climate change is as a social issue and which solutions can succeed Gaither's Dictionary of Scientific Quotations

Carl C. Gaither,Alma E. Cavazos-Gaither,2008-01-08 Scientists and other keen observers of the natural world sometimes make or write a statement pertaining to scientific activity that is destined to live on beyond the brief period of time for which it was intended This book serves as a collection of these statements from great philosophers and thought influencers of science past and present It allows the reader quickly to find relevant quotations or citations Organized thematically and indexed alphabetically by author this work makes readily available an unprecedented collection of approximately 18 000 quotations related to a broad range of scientific topics **Earth and Life** Anne Nédélec,2025-07-02 Telling the story of the four billion year history of Earth and life this book attempts to answer some of our most fundamental questions how did our Earth come to be How did the Earth s oceans atmosphere and climate form How did life begin Following the timeline of our planet Earth and Life takes us from the creation of planet Earth to fluctuating global environments from floods of lava and

giant meteorites to great oceans and verdant landscapes It takes us from the first life on our planet to the evolution of various species including the first humans and explains how life has always changed the climate and environment on Earth Life originated as tiny microbes from the ocean depths formed mysterious reefs then the first algae marine animals and finally plants and vertebrates that invaded the continents The vast oceans eventually started to separate as plate tectonics built up and broke supercontinents in an ever changing geography Roughly two billion years ago marine photosynthesizing bacteria began to oxygenate the oceans and atmosphere changing the biological landscape forever and producing giant mineral deposits Colour burst into the continents from grey to red due to oxidized tropical weathering and finally to green due to the first land plants and forests Written with expertise and illustrated with clarity this fascinating book is based on all the most recent scientific evidence and should be widely accessible Whether you re interested in geology biology or the wider natural world in general if you are intent on understanding how Earth and life evolved then this book explains it all

Global Climate Change David Kitchen,2023-09-29 Earth s climate is changing This book investigates the scientific environmental social political and economic aspects of climate change It enables students to reach an informed opinion and encourages active engagement in finding solutions It begins with a strong introduction to the scientific factors that drive natural and anthropogenic climate change and expands over three chapters to explore the impact of greenhouse gases on the distribution of solar energy across land sea ice and air The author examines geologically ancient climates in order to highlight possible future scenarios and case studies from around the world highlight the impact of climate change on the physical and human environment The final chapters investigate how society can respond to the challenges of climate change and overcome the political social and economic factors that are barriers to progress focusing on the role of energy policy fiscal policy and risk assessment as a means to stimulate discussion about science society and the role of the media Science is the foundation of any solution but to turn this knowledge into action requires the application of a broad set of skills that are rooted in the liberal arts experience such as critical thinking analytical thinking problem solving and communication This textbook will be an essential resource for students taking courses in environmental geography climate change natural hazards climatology and meteorology
