ICH (Guidelines)

3.1 INTRODUCTION TO ICH

(INTERNATIONAL CONFERENCE ON HARMONIZATION)

- Harmonization of Technical Requirements for ICH is the "International Conference on Harmonization of Technical Requirements for Registration of Pharmaceuticals for Human Use".
- It is a unique project that brings together the regulatory authorities of Europe, Japan and USA and experts from the pharmaceutical industry in these three regions to discuss scientific and technical aspects of product registration.
- ICH is a joint initiative involving both regulators and research-based industry representatives of the EU, Japan and the US in scientific and technical discussions of the testing procedures required to assess and ensure the safety, quality and efficacy of medicines.
- The focus of ICH has been on the technical requirements for medicinal products containing new drugs.
- The vast majority of those new drugs and medicines are developed in Western Europe, Japan and USA, when ICH was established it was agreed that its scope would be confined to registration in those three regions.

3.2 PURPOSE

- The purpose of ICH is to make recommendation on ways to achieve greater Harmonization in the interpretation and application of technical guidelines and requirements for Product registration in order to reduce or obviate the need to duplicate the testing carried out during the research and development of new medicines.

3.2.1. OBJECTIVES

- To increase international harmonization of technical requirements to ensure that safe, effective and high quality medicines are developed.
- To harmonize technical requirements for registration or marketing approval.
- To develop and register pharmaceuticals in the most efficient and cost effective manner.
- To promote public health.
- To prevent unnecessary duplication of clinical trials on humans.
- To minimize the use of animal testing without compromising safety and effectiveness of drug.

Gad,2020-02-24 While the safety assessment biocompatibility of medical devices has been focused on issues of local tissue tolerance irritation sensitization cytotoxicity and selected quantal effects genotoxicity and acute lethality since first being regulated in the late 1950s this has changed as devices assumed a much more important role in healthcare and became more complex in both composition and in their design and operation Add to this that devices now frequently serve as delivery systems for drugs and that drugs may be combined with devices to improve device performance and the problems of ensuring patient safety with devices has become significantly more complex A part of this requirements for ensuring safety once based on use of previously acceptable materials largely polymers and metals have come to requiring determining which chemical entities are potentially released from a device into patients and how much is released Then an appropriate and relevant yet also conservative risk assessment must be performed for each identified chemical structure The challenges inherent in meeting the current requirements are multifold and this text seeks to identify understand and solve all of them Identify and verify the most appropriate available data As in most cases such data is for a different route of exposure transform it for use in assessing exposure by the route of interest As the duration and rate of exposure to moieties released from a device are most frequently different longer than what available data speaks to transformation across tissue is required As innate and adaptive immune responses are a central part of device patient interaction assessing potential risks on this basis are required Incorporating assessments for special populations such as neonates Use of Q SAR Quantitative Structure Activity Relationships modeling in assessments Performance and presentation of integrative assessments covering all potential biologic risks Appendices will contain summarized available biocompatibility data for commonly used device materials polymers and metals and safety assessments on the frequently seen moieties in extractions from devices
