Smith, 1996 Research in Brief , 1995 Evaluating Office Lighting Environments , 1989 Data from a post occupancy evaluation POE of 912 work stations with lighting power density LPD photometric and occupant response measures were examined in a detailed second level analysis Seven types of lighting systems were identified with different combinations of direct and indirect ambient lighting and task lighting and daylight The mean illuminances with body shadow at the primary task location were within the IES target values for office tasks with a range of mean illuminances from 32 to 75 fc depending on the lighting system The median LPD was about 2.36 W sq ft with about one third the work stations having LPD s at or below 2.0 W sq ft Although a majority of the occupants 69% were satisfied about their lighting the highest

percentage of those expressing dissatisfaction 37% with lighting had an indirect fluorescent furniture mounted IFFM system The negative reaction of so many people to the IFFM system suggests that the combination of task lighting with an indirect ambient lighting system had an important influence on lighting satisfaction even though task illuminances tended to be higher with the IFFM system Concepts of lighting quality visual health and control were explored as well as average luminance to explain the negative reactions to the combination of indirect lighting with furniture mounted lighting

Fundamentals of Building Energy Dynamics Bruce D. Hunn, 1996 Fundamentals of Building Energy Dynamics assesses how and why buildings use energy and how energy use and peak demand can be reduced It provides a basis for integrating energy efficiency and solar approaches in ways that will allow building owners and designers to balance the need to minimize initial costs operating costs and life cycle costs with need to maintain reliable building operations and enhance environmental quality both inside and outside the building Chapters trace the development of building energy systems and analyze the demand side of solar applications as a means for determining what portion of a building's energy requirements can potentially be met by solar energy Following the introduction the book provides an overview of energy use patterns in the aggregate U S building population Chapter 3 surveys work on the energy flows in an individual building and shows how these flows interact to influence overall energy use Chapter 4 presents the analytical methods techniques and tools developed to calculate and analyze energy use in buildings while chapter 5 provides an extensive survey of the energy conservation and management strategies developed in the post energy crisis period The approach taken is a commonsensical one starting with the proposition that the purpose of buildings is to house human activities and that conservation measures that negatively affect such activities are based on false economies The goal is to determine rational strategies for the design of new buildings and the retrofit of existing buildings to bring them up to modern standards of energy use The energy flows examined are both large scale heating systems and small scale choices among appliances Solar Heat Technologies Fundamentals and Applications Volume 4
