Honda Harmony 2013 Service Manual:

Optimisation of Dynamic Heterogeneous Rainfall Sensor Networks in the Context of Citizen Observatories

Juan Carlos Chacon-Hurtado,2019-11-21 Precipitation drives the dynamics of flows and storages in water systems making its monitoring essential for water management Conventionally precipitation is monitored using in situ and remote sensors In situ sensors are arranged in networks which are usually sparse providing continuous observations for long periods at fixed points in space and due to the high costs of such networks they are often sub optimal To increase the efficiency of the monitoring networks we explore the use of sensors that can relocate as rainfall events develop dynamic sensors as well as increasing the number of sensors involving volunteers citizens This research focusses on the development of an approach for merging heterogeneous observations in non stationary precipitation fields exploring the interactions between different definitions of optimality for the design of sensor networks as well as development of algorithms for the optimal scheduling of dynamic sensors This study was carried out in three different case studies including Bacchiglione River Italy Don River U K and Brue Catchment U K The results of this study indicate that optimal use of dynamic sensors may be useful for monitoring precipitation to support water management and flow forecasting **Honda Service Manual for Vehicle Type AB. ,197?**
