Psychology Antonia C. Lyons, Kerry Chamberlain, 2006-02-16 This textbook aims to provide students with a stimulating alternative to the textbooks currently available by placing the discipline within the context of the social world and encouraging them to question some of the assumptions and values underlying much current research. A comprehensive survey of the discipline is provided, framed within a lifespan approach and emphasising social-cultural factors such as gender, ethnicity, and social-economic status. All major topics are covered, including health behaviours, health promotion, coping strategies, stress, biomedical and biopsychosocial models of health and illness, chronic illnesses, psychoneuroimmunology, disability, pain, and patient-provider communication. Each topic is situated within its social and cultural context and constantly linked back to real-world experience. Chapters include valuable features such as research updates, learning objectives, and recommended readings. This book will be an invaluable resource for students of health psychology across a range of disciplines, including psychology, anthropology, and health studies. *Health Psychology* Linda Brannon, Jess Feist, 1992 This text covers a variety of subjects in the field of health psychology, such as stress, pain, coping, behavior, and chronic disease, and preventing injuries and disease through behavioral modification. Each chapter begins with the basic questions the material will try to address and a case study that applies to these issues and ends with summarized answers, a glossary, and suggested readings. Brannon and Feist, both of McNeese State University, address a number of controversial subjects and encourage their readers to view the research critically. Handbook of Occupational Health and Wellness Robert J. Gatchel, Izabela Z. Schultz, 2012-12-21 This book integrates the growing clinical research evidence

related to the emerging transdisciplinary field of occupational health and wellness. It includes a wide range of important topics ranging from current conceptual approaches to health and wellness in the workplace to common problems in the workplace such as presenteeism, absenteeism, common illnesses, job-related burnout, to prevention and intervention methods. It consists of five major parts. Part I, Introduction and Overviews, provides an overview and critical evaluation of the emerging conceptual models that are currently driving the clinical research and practices in the field. This serves as the initial platform to help better understand the subsequent topics to be discussed. Part II, Major Occupational Symptoms and Disorders, exposes the reader to the types of critical occupational health risks that have been well documented as well as the financial and productivity losses associated with them. In Part III, Evaluation of Occupational Causes and Risks to Workers' Health, a comprehensive evaluation of these risks and causes of such occupational health threats is provided. This leads to Part IV, Prevention and Intervention Methods, which delineates methods to prevent or intervene with these potential occupational health issues. Part V, Research, Evaluation, Diversity, and Practice, concludes the book with the review of epidemiological measurement, diversity, policy, and practice issues with guidelines on changes that are needed to decrease the economic and health care impact of illnesses in the workplace and recommendations for the future. All chapters provide a balance among theoretical models, current best practice guidelines, and evidence-based documentation of such models and guidelines. The contributors were carefully selected for their unique knowledge as well as their ability to meaningfully present this information in a comprehensive manner. As such, this Handbook is of great interest and use to health care and rehabilitation professionals, management, and human resource personnel, researchers, and academicians alike.
