Measurement is an important concern for the progress of psychology both as a basic science and as a field of application. The development of psychological research and practice would not be possible without sound assessment and measuring procedures. This book presents a collection of personality and psychopathology scales developed originally in Arabic and translated into English since self reports and questionnaires play a prominent role in psychological research and practice as they are simple and cost less than other methods of assessment. Furthermore, these scales are suitable in surveys and epidemiological studies with large samples. This book will be useful in different disciplines such as psychology, psychiatry, epidemiology, gerontology, social work and social sciences.
