Swart, Kyeongsoon Park, 2012-12-15 The idea for this book arose out of the realization that although excellent surveys and a phosphor handbook are available there is no single source covering the area of phosphate based phosphors especially for lamp industry Moreover as this field gets only limited attention in most general books on luminescence there is a clear need for a book in which attention is specifically directed toward this rapidly growing field of solid state lighting and its many applications This book is aimed at providing a sound introduction to the synthesis and optical characterization of phosphate phosphor for undergraduate and graduate students as well as teachers and researchers The book provides guidance through the multidisciplinary field of solid state lighting specially phosphate phosphors for beginners scientists and engineers from universities research organizations and especially industry In order to make it useful for a wide audience both fundamentals and applications are discussed together

Fortran Optimization Michael Metcalf, 1982 FORTRAN has always been intended to be an efficient high level language and its adherence to this original design aim has helped it to achieve a dominant position in scientific engineering and other areas of computing However advice on how to obtain the best possible performance has until now been scattered through the literature in brief articles detailed reports on specific computers and very general and often superficial chapters in books on FORTRAN programming This book for the first time deals with the whole topic in a systematic fashion and every effort has been taken to include only the most up to date information and to present it in a way which clearly distinguishes between the different techniques required for the various types of compiler
