Koordination Supply Networks Ludwig Habersetzer:

Koordination in Supply Networks Ludwig Habersetzer, 2014 *The Network Challenge (Chapter 13)* Serguei Netessine, 2009-05-19 As manufacturing supply chains have moved from vertically integrated factories to diffused networks manufacturers need to manage complex global webs of suppliers In this chapter Netessine examines supply networks in two industries in particular automobiles and aerospace and defense He explores how different strategies and technologies have helped companies manage organize and capitalize on their networks of suppliers He discusses how Japanese automakers have used partnerships to outperform their U S rivals who have taken a more adversarial approach to their suppliers He also considers how companies such as Airbus and Boeing have used technology to coordinate and integrate far flung networks While Netessine notes that the formal study of network based supply chains is just emerging he offers insights from research and practice on the growing importance of supply networks and strategies for managing them successfully Supply Chain Coordination Mechanisms Martin Albrecht, 2010-05-03 Integrated supply chain planning is well understood by theory and widely applied in practice however only with respect to intra organisational supply chains In inter organisational supply chains an additional yet unresolved problem arises due to confidentiality reasons decentralized parties keep their local data private which prevents an integrated planning Local planning procedures such as upstream planning which are usually applied then result in suboptimal solutions for the supply chain as a whole In this work new mechanisms for inter organizational collaborative supply chain planning are presented These mechanisms are able to identify the systemwide optimum for several classes of supply chain planning problems They can be applied by two or more self interested parties and do not require a trusted third party Extensive computational tests for randomly generated and real word data suggest a favorable performance of these mechanisms **Supply Chain Coordination in Case of Asymmetric Information** Guido Vogt, 2011-07-05 Information sharing is frequently promoted as a mean to improve the supply chain performance This work shows the results of behavioral experiments in which the participants share private information in order to influence the contract terms in a Just in Time environment It is shown that the impact of information sharing is ambiguous and dependent on several factors such as contract flexibility and complexity or the interacting behavioral types The experimental results form the basis for a behavioral principal agent model that gives valuable insights on how the interaction of trust trustworthiness and the information sharing strategy impacts the supply chain performance *Coordination in Heterarchical Supply Chains* Peer Küppers, 2015 English summary Today s globalized business environment is characterized by a strong competitive pressure which requires companies to improve their supply chains effectiveness and efficiency by coordination However the organizational structures are more and more characterized by networks containing equal partners which restricts the application of coordination mechanisms Collaborative planning aims at covering the resulting requirements and gains more and more attention in research and practice Within these approaches the companies shared

decision space is collaboratively explored and evaluated by means of formally specified interaction processes which are connected to local planning models. These procedures allow to find a mutually agreed and beneficial planning solutions which improve the supply chain's overall performance. Within this domain a limited degree of practical implementations has been identified. Thus a large potential for supporting supply chain planners and IT departments in the selection, customization and implementation of suitable and promising coordination mechanisms exists. Addressing these potentials as part of his doctoral studies, Peer Koppers developed the Framework for Intelligent Supply Chain Collaboration FRISCO. It contains methods and tools for designing and modelling collaborative planning concepts as well as an agent based simulation environment for the use case driven and quantitative evaluation of their coordination performance. The framework's utility has been shown in various scenarios from different industries which emphasizes its generalizability.

German description: Um dem Leistungsdruck einer globalisierten Wirtschaft begegnen zu können, streben Unternehmen verbesserte Koordination zur Steigerung der Supply Chain Effizienz bzw. Effektivität an. Jedoch weisen heutige Organisationsstrukturen, die vielfach durch Netzwerke mit teilweise gleichberechtigten Partnerschaften gekennzeichnet sind, Restriktionen für Koordinationsmechanismen auf. Die kollaborative Planung stellt einen Koordinationsansatz dar, der diese Anforderungen berücksichtigt und stetig an Bedeutung in Forschung und Praxis gewinnt. Durch die formelle Spezifikation von Interaktionsprozessen und deren Anbindung an lokale Planungsmodelle wird der Supply Chain weite Entscheidungsraum kollaborativ durchsucht. So wird aufgrund der Komplexität meist IT-basiert einvernehmliche Koordination erreicht und die Gesamtperformance verbessert. Hinsichtlich dieser Planungskonzepte konnte ein geringer Grad der praktischen Durchdringung und somit großes Potential zur Unterstützung von Supply Chain Planern und IT Abteilungen in der Auswahl, Anpassung und Implementierung geeigneter Koordinationsmechanismen identifiziert werden. Daher entwickelte Peer Koppers im Rahmen seiner Promotion das Framework for Intelligent Supply Chain Collaboration FRISCO. Es enthält Methoden und Werkzeuge zur Gestaltung und Modellierung kollaborativer Planungskonzepte sowie eine agentenbasierte Simulationsumgebung zur Bewertung der Koordinationsleistung im Anwendungsfall. Der Nutzen des Frameworks konnte anhand verschiedener Szenarien aus unterschiedlichen Branchen dargestellt und damit dessen Generalisierbarkeit unterstrichen werden.

Peer Koppers, Jahrgang 1981, studierte Technische Informatik an der Technischen Universität Berlin und Betriebswirtschaftslehre an der Westfälischen Wilhelms Universität Münster. Im Anschluss war er als wissenschaftlicher Mitarbeiter am European Research Center for Information Systems (ERCIS) tätig. Im November 2013 erfolgte die Promotion zum Doktor der Wirtschaftswissenschaften. Seit 2015 arbeitet er als Data Scientist im Bereich Internet of Things. Zuvor war er als IT Projektmanager in der Luftfahrtindustrie tätig.

Supply Chain Coordination in Case of Asymmetric Information

Guido Voigt, 2011-07-07. This book uses the result of a behavioral experimental to form a behavioral principal agent model that gives valuable insight into the interaction of trust, trustworthiness and information sharing strategy and how this impacts

the supply chain performance
