**Cultural Analysis** Hans Gullestrup, 2006 With internationalization the world is becoming smaller and the opportunity to meet people from other countries and cultures is becoming more common providing the need for cooperation shared knowledge and cross border trade Individual cultures tend to understand themselves best and base their understanding of the world and its peoples on ideas they each have come to believe irrespective of reality and thus make it difficult to reach a proper understanding of other cultures This book considers intercultural understanding and co action partly by means of general insights into the concept of culture and the dimensions which bring about cultural differences and partly as a methodology to analyze a certain culture whether one's own or others This leads towards an understanding of cultural complexity and cultural differences among people The book provides a discussion of a number of ethical issues which almost invariably will arise when people meet and co act across cultural boundaries Cultural Analysis offers a theoretical abstract proposal for cultural understanding intercultural plurality and complexity

**Structural Equation Modeling in Educational Research**, 2009-01-01 Over the years researchers have developed statistical methods to help them investigate and interpret issues of interest in many discipline areas These methods range from descriptive to inferential to multivariate statistics As the psychometrics measures in education become more complex vigorous and robust methods were needed in order to represent research data efficiently One such method is Structural Equation Modeling SEM SEM is a statistical technique that allows the simultaneous analysis of a series of structural equations It also allows a dependent variable in one equation to become an independent variable in another equation It is a comprehensive statistical approach to testing hypotheses about relations among observed and latent variables SEM is commonly known as causal modeling or path analysis which hypothesizes causal relationships among variables and tests the causal models with a linear equation system As educational research questions become more complex they need to be evaluated with more sophisticated tools The pervasive use of SEM in the literature has shown that SEM has a potential to be of assistance to modern educational researchers This book will bring together prominent educators and researchers from around the world to share their contemporary research on structural equation modeling in educational settings The chapters provide information on recent trends and developments and effective applications of the different models to answer various educational research questions This book is a critical and specialized source that describes recent advances in SEM in international academia
