

# ILLUMINATED PIXELS

The why, what, and how of digital lighting

Remember that, besides a computer, you'll also need to learn something for lighting in the office, home, and even on stage.

## What's new and important?

This question about the progress of new light technology is often answered, more or less, by saying, "There hasn't been anything new in lighting technology since the war when light bulbs were invented and put

out there and they probably aren't much brighter now and they're not much better."

It's true, a modern incandescent bulb emits light, and that's important, but modern bulbs are not much different from the incandescent light bulbs that were invented in the late 1800s. The difference is that modern bulbs are much more efficient and last much longer.

## "How will new technology help?"

The most and best new technology isn't the computer itself, but the way the computer helps lighting designers work.

Using the computer allows a designer to manipulate light rays in a way that is almost impossible to do with a pencil and paper. And, because computers are so powerful, they can do things that were once thought of as impossible. For example, they can do things that were once thought of as impossible, such as creating a light that is as bright as the sun, but that is also as soft as a candle.
