Image and Video Compression Madhuri A. Joshi, Mehul S. Raval, Yogesh H. Dandawate, Kalyani R. Joshi, Shilpa P. Metkar, 2014-11-17 Image and video signals require large transmission bandwidth and storage leading to high costs. The data must be compressed without a loss or with a small loss of quality. Thus, efficient image and video compression algorithms play a significant role in the storage and transmission of data. **Image and Video Compression Fundamentals Techniques and**

Digital Image Processing and Analysis Scott E. Umbaugh, 2022-12-30 Digital Image Enhancement, Restoration, and Compression focuses on human vision-based imaging application development. Examples include making poor images look better, the development of advanced compression algorithms, special effects imaging for motion pictures, and the restoration of satellite images distorted by atmospheric disturbance. This book presents a unique engineering approach to the practice of digital imaging, which starts by presenting a global model to help gain an understanding of the overall process, followed by a breakdown and explanation of each individual topic. Topics are presented as they become necessary for understanding the practical imaging model under study, which provides the reader with the motivation to learn about and use the tools and methods being explored. The book includes chapters on imaging systems and software, the human visual system, image transforms, image filtering, image enhancement, image restoration, and image compression. Numerous examples, including over 700 color images, are used to illustrate the concepts discussed. Readers can explore their own application development with any programming language, including C, C++, MATLAB, Python, and R, and software is provided for both the Windows, C++, and MATLAB environments. The book can be used by the academic community in teaching and research, with over 1,000 PowerPoint slides and a complete solutions manual to the over 230 included problems. It can also be used for self-study by those involved with application development, whether they are engineers, scientists, or artists. The new edition has been extensively updated and includes numerous problems and programming exercises that will help the reader and student develop their skills.

State of the Art in Digital Media and Applications Rae Earnshaw, 2017-08-25 This book presents the user-facing aspects of digital media, from the web and computer games to mobile technologies and social media, and demonstrates how these are continuously growing and developing. The convergence of IT, telecommunications, and media is bringing about a revolution in the way information is collected, stored, accessed, and distributed. Rae Earnshaw's book explores the principal factors driving this and the ways in which social and cultural contexts are affected by media content. This is Professor Earnshaw's fourth book in a series that focuses on digital media and creativity, and through the use of Case Studies, the theoretical, practical, and technical aspects of digital media are examined. Readers are informed about how the user, as content creator, publisher, and broadcaster, is changing the traditional roles of news media publishers and entertainment corporations. Topics such as the evolution of digital imaging and the phenomenon of social media are discussed in relation to this. Professor Earnshaw also demonstrates how changes in technology produce shifts in the ways

that consumers utilize it in an increasing variety of application domains such as e books digital cameras Facebook and Twitter State of the Art in Digital Media and Applications will be invaluable for readers that want a comprehensive look at how emerging digital media technologies are being used and how they are transforming how we create consume exchange and manipulate media content *Human-Computer Interaction. Theory, Design, Development and Practice* Masaaki Kurosu, 2016-07-04 The 3 volume set LNCS 9731 9732 and 9733 constitutes the refereed proceedings of the 18th International Conference on Human Computer Interaction HCII 2016 held in Toronto ON Canada in July 2016 The total of 1287 papers and 186 posters presented at the HCII 2016 conferences and were carefully reviewed and selected from 4354 submissions The papers thoroughly cover the entire field of Human Computer Interaction addressing major advances in knowledge and effective use of computers in a variety of application areas The volumes constituting the full 27 volume set of the conference proceedings **Medical Imaging Systems Techniques and Applications** Cornelius T.

Leondes, 1998-05-15 The field of medical imaging has been revolutionized by new techniques in powerful computations image processing and modalities such as Computer Aided Tomography CAT and Magnetic Resonance Imaging MRI among others It is therefore an appropriate topic to be included in this series that studies the marriage of computer capabilities and medical imaging which exemplifies a significant manifestation of relatively recent valuable technologies known as the second industrial revolution Addresses the design implementation evaluation and application of algebraic reconstruction techniques ART examines the merging of signal processing with scattering theory in computed tomography CT studies the difficult challenge of texture analysis in medical imaging compresses medical imaging data of various modes for patients for a framework of multimodality image base management MIBM and examines the enabling technologies to do so and covers the effectiveness of data compression based on digitized wavelets This book clearly reveals the effectiveness and great significance of the modalities available and with further development the essential role they will play in the future

Video Coding Luis Torres, Murat Kunt, 2012-12-06 In recent years there has been an increasing interest in Second Generation Image and Video Coding Techniques These techniques introduce new concepts from image analysis that greatly improve the performance of the coding schemes for very high compression This interest has been further emphasized by the future MPEG 4 standard Second generation image and video coding techniques are the ensemble of approaches proposing new and more efficient image representations than the conventional canonical form As a consequence the human visual system becomes a

fundamental part of the encoding decoding chain More insight to distinguish between first and second generation can be gained if it is noticed that image and video coding is basically carried out in two steps First image data are converted into a sequence of messages and second code words are assigned to the messages Methods of the first generation put the emphasis on the second step whereas methods of the second generation put it on the first step and use available results for the second step As a result of including the human visual system second generation can be also seen as an approach of seeing the image composed by different entities called objects This implies that the image or sequence of images have first to be analyzed and or segmented in order to find the entities It is in this context that we have selected in this book three main approaches as second generation video coding techniques Segmentation based schemes Model Based Schemes Fractal Based Schemes LIST Video Coding The Second Generation Approach is an important introduction to the new coding techniques for video As such all researchers students and practitioners working in image processing will find this book of interest
