Insight and Creativity in Problem Solving Kenneth J. Gilhooly, Linden J. Ball, Laura Macchi, 2019-10-23 To date we have only a fragmentary understanding of the thought processes that engender insightful solutions to problems that require a change in representation or the discovery of distant associations to presented information We likewise have only a piecemeal understanding of the thinking that underpins creative problem solving where solutions are needed that are new to the solver Recently there has been a growing interest in removing the mystery from insight and creativity through better specified theories and theory driven experimentation The chapters in this volume reflect key developments in this expanding field of insight and creativity research Collectively the chapters converge on a nuanced view of insight and creative thinking as often arising from the interplay between two qualitatively distinct types of processes that interact to yield sudden surprising and innovative solutions to problems that initially seemed impenetrable and resistant to the application of inventive ideas This dual process perspective which capitalises on the distinction between special automatic unconscious and associative Type 1 processes and routine controlled conscious and analytic Type 2 processes helps advance a theoretical understanding of insight and creativity whilst also provoking important new research questions This book was originally published as a special issue of Thinking and Reasoning

Over,2004-06-02 The field of evolutionary cognitive psychology has stimulated considerable interest and debate among cognitive psychologists and those working in related areas In this collection leading experts evaluate the status of this new field providing a critical analysis of its most controversial hypotheses These hypotheses have far reaching implications for cognition including a modular view of the mind which rejects in its extreme form any general learning or reasoning abilities Some evolutionary psychologists have also proposed content dependent accounts of conditional reasoning and probability judgements which in turn have significant and equally controversial implications about the nature of human reasoning and decision making The contributions range from those that are highly critical of the hypotheses to those that support and develop them The result is a uniquely balanced cutting edge evaluation of the field that will be of interest to psychologists philosophers and those in related subjects who wish to find out what evolutionary considerations can and cannot tell us about the human mind Mental Models and the Mind Carsten Held,Gottfried M-GV Vosgerau,Markus Knauff,2006-01-11

Cognitive psychology cognitive neuroscience and philosophy of mind are names for three very different scientific fields but they label aspects of the same scientific goal to understand the nature of mental phenomena Today the three disciplines strongly overlap under the roof of the cognitive sciences The book s purpose is to present views from the different disciplines on one of the central theories in cognitive science the theory of mental models Cognitive psychologists report their research on the representation and processing of mental models in human memory Cognitive neuroscientists demonstrate how the brain processes visual and spatial mental models and which neural processes underlie visual and spatial thinking Philosophers report their ideas about the role of mental models in relation to perception emotion representation and intentionality The single articles have different and mutually complementing goals to introduce new empirical methods and approaches to report new experimental results and to locate competing approaches for their interpretation in the cross

disciplinary debate The book is strongly interdisciplinary in character It is especially addressed to researchers in any field related to mental models theory as both a reference book and an overview of present research on the topic in other disciplines However it is also an ideal reader for a specialized graduate course Examines the theory of mental models from the perspectives of cognitive psychology cognitive neuroscience and philosophy of the mind Introduces new empirical methods experimental results and interdisciplinary yet complementary approaches Serves as a reference book and an overview of current research
