healthcare to increase the availability of health information for treatment and to implement safeguards that cannot be applied easily or cost effectively to paper based health records. However, the digitization of health information is also raising new privacy risks and concerns. Sensitive health information in digital form is more easily aggregated, used, and shared. In addition, the rising cost of healthcare and the search for efficiency may create incentives to use the information in new ways. Research has consistently shown that while the public sees the potential value of health information exchange and technological advancements, it remains gravely concerned about the privacy of their sensitive health information. As a result, it is becoming increasingly clear that ensuring public trust will be critical to the successful implementation of nationwide health information exchange. The purpose of this second edition is two fold: 1 to educate readers about privacy concepts and 2 highlight key privacy issues facing the nation and the healthcare community as it moves towards electronic health records and health information exchange. The first three chapters are descriptive in nature, defining privacy and distinguishing it from security, defining the complex legal landscape for health information privacy, and setting the stage for the following chapters by describing the current landscape of the evolving healthcare environment. The following chapters discuss specific privacy issues and challenges in detail. The book concludes with a chapter providing a view to the future of healthcare and the association privacy implications. This is an updated version of one of HIMSS best selling books on information privacy. **For the Record** National Research Council, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Commission on Physical Sciences, Mathematics, and Applications, Committee on Maintaining Privacy and Security in Health Care Applications of the National Information Infrastructure, 1997-06-09. When you visit the doctor, information about you may be recorded in an office computer. Your tests may be sent to a laboratory or consulting physician. Relevant information may be transmitted to your health insurer or pharmacy. Your data may be collected by the state government or by an organization that accredits health care or studies medical costs. By making information more readily available to those who need it, greater use of computerized health information can help improve the quality of health care and reduce its costs. Yet health care organizations must find ways to ensure that electronic health information is not improperly divulged. Patient privacy has been an issue since the oath of Hippocrates first called on physicians to keep silence on patient matters, and with highly sensitive data, genetic information, HIV test results, psychiatric records, entering patient records, concerns over privacy and security are growing. **For the Record** responds to the health care industry's need for greater guidance in protecting health information that increasingly flows through the national information infrastructure from patient to provider, payer, analyst, employer, government agency, medical product manufacturer, and beyond. This book makes practical, detailed recommendations for technical and organizational solutions and national level initiatives. **For the Record** describes two major types of privacy and security concerns that stem from the availability of health information in electronic form: the increased potential for inappropriate release of information held by individual organizations, whether by

those with access to computerized records or those who break into them and systemic concerns derived from open and widespread sharing of data among various parties The committee reports on the technological and organizational aspects of security management including basic principles of security the effectiveness of technologies for user authentication access control and encryption obstacles and incentives in the adoption of new technologies and mechanisms for training monitoring and enforcement For the Record reviews the growing interest in electronic medical records the increasing value of health information to providers payers researchers and administrators and the current legal and regulatory environment for protecting health data This information is of immediate interest to policymakers health policy researchers patient advocates professionals in health data management and other stakeholders
