Establishing Cyber Security Programs Through the Community Cyber Security Maturity Model (CCSMM) White, Gregory B., Sjelin, Natalie, 2020-07-17 As society continues to heavily rely on software and databases the risks for cyberattacks have increased rapidly As the dependence on computers has become gradually widespread throughout communities and governments there is a need for cybersecurity programs that can assist in protecting sizeable networks and significant amounts of data at once Implementing overarching security policies for software systems is integral to protecting community wide data from harmful attacks Establishing Cyber Security Programs Through the Community Cyber Security Maturity Model CCSMM is an essential reference source that discusses methods in applying sustainable cybersecurity programs and policies within organizations governments and other communities Featuring research on topics such as community engagement incident planning methods and information sharing this book is ideally designed for cybersecurity professionals security analysts managers researchers policymakers students practitioners and academicians seeking coverage on novel policies and programs in cybersecurity implementation

Evidence-Based Cybersecurity Pierre-Luc Pomerleau, David Maimon, 2022-06-23 The prevalence of cyber dependent crimes and illegal activities that can only be performed using a computer computer networks or other forms of information communication technology has significantly increased during the last two decades in the USA and worldwide As a result cybersecurity scholars and practitioners have developed various tools and policies to reduce individuals and organizations risk of experiencing cyber dependent crimes However although cybersecurity research and tools production efforts have increased substantially very little attention has been devoted to identifying potential comprehensive interventions that consider both

human and technical aspects of the local ecology within which these crimes emerge and persist Moreover it appears that rigorous scientific assessments of these technologies and policies in the wild have been dismissed in the process of encouraging innovation and marketing Consequently governmental organizations public and private companies allocate a considerable portion of their operations budgets to protecting their computer and internet infrastructures without understanding the effectiveness of various tools and policies in reducing the myriad of risks they face Unfortunately this practice may complicate organizational workflows and increase costs for government entities businesses and consumers The success of the evidence based approach in improving performance in a wide range of professions for example medicine policing and education leads us to believe that an evidence based cybersecurity approach is critical for improving cybersecurity efforts This book seeks to explain the foundation of the evidence based cybersecurity approach review its relevance in the context of existing security tools and policies and provide concrete examples of how adopting this approach could improve cybersecurity operations and guide policymakers decision making process The evidence based cybersecurity approach explained aims to support security professionals policymakers and individual computer users decision making regarding the deployment of security policies and tools by calling for rigorous scientific investigations of the effectiveness of these policies and mechanisms in achieving their goals to protect critical assets This book illustrates how this approach provides an ideal framework for conceptualizing an interdisciplinary problem like cybersecurity because it stresses moving beyond decision makers political financial social and personal experience backgrounds when adopting cybersecurity tools and policies This approach is also a model in which policy decisions are made based on scientific research findings
