Moscow Semiotic School The author shows how these works have been influential through the works topological semantics that provide a vocabulary for literary analysis and practical tools for spatial story design to predict to some extent user behavior and through the semiotic study of text culminating in a cybernetical method of systems thinking that allows for process control of user generated spaces She demonstrates that cybernetical research in the United States contributed to the development of agonal shooter games while cybernetical research in the Soviet Union had a massive influence on role playing games and consequently interactive storytelling and spatial story design Delineating how Soviet narratology had a formative yet somehow unnamed influence on the development of structuralist and post structuralist narrative theory this book will be an essential read for academics and artists in performance art game design interactive storytelling narratology philosophy but also AI research and human machine interaction   Literary Education and Digital Learning: Methods and Technologies for Humanities Studies Peer, Willie van,Zyngier, Sonia,Viana, Vander,2010-06-30 This book provides insight into the most relevant issues in literary education and digital learning covering literary aspects both from educational and research perspectives Provided by publisher   *Innovation and Expansion in Translation Process Research* Isabel Lacruz,Riitta Jääskeläinen,2018-01-15 Cognitive research in translation and interpreting has reached a critical threshold of maturity that is triggering rapid expansion along exciting new paths that potentially lead to deeper connections with other disciplines Innovation and Expansion in Translation Process Research reflects this broadening scope and reach emphasizing ongoing methodological innovations diversification of research topics and questions and rich interactions with adjacent fields of research The contributions to the volume can be grouped within four loosely defined themes advances in traditional topics in translation process research including problems in translation translation competence or expertise and specialization of translators advances in research into the emotional or affective aspects of translating and translator training innovations in machine translation and post editing expansion of cognitively oriented translation studies to include editing processes and reception studies This timely volume highlights the burgeoning growth diversification and connectivity of translation process research
