Geographical Information Systems in Hydrology V.P. Singh, M. Fiorentino, 2013-03-09 The last few years have witnessed an enormous interest in application of GIS in hydrology and water resources This is partly evidenced by organization of several national and international symposia or conferences under the sponsorship of various professional organizations This increased interest is in a large measure in response to growing public sensitivity to environmental quality and management The GIS technology has the ability to capture store manipulate analyze and visualize the diverse sets of georeferenced data On the other hand hydrology is inherently spatial and distributed hydrologic models have large data requirements The integration of hydrology and GIS is therefore quite natural The integration involves three major components 1 spatial data construction 2 integration of spatial model layers and 3 GIS and model interface GIS can assist in design calibration modification and comparison of models This integration is spreading worldwide and is expected to accelerate in the foreseeable future Substantial opportunities exist in integration of GIS and hydrology We believe there are enough challenges in use of GIS for conceptualizing and modeling complex hydrologic processes and for globalization of hydrology The motivation for this book grew out of the desire to provide under one cover a range of applications of GIS technology in hydrology It is hoped that the book will stimulate others to write more comprehensive texts on this subject of

growing importance *Thriving in an Academic Career* Michael Solem, Kenneth Foote, Shannon O'Lear, LaToya Eaves, Jongwon Lee, 2024-12-30 This book provides an invaluable guide on how to achieve a successful and fulfilling academic career. Academics must balance multiple roles and responsibilities between teaching, research, and offering services to the department, university, and broader community. This book provides practical, research-based guidance on how to adopt a healthy and balanced perspective that accounts for these interconnections. Research shows that faculty who achieve early balance in their academic responsibilities and home life are more likely to succeed in all aspects of their career while strengthening the quality and climate of their programs and campuses. This book's chapters accordingly feature case studies and examples that dig deeper into strategies and principles of holistic and balanced career practice and planning. This book assists readers in understanding the relationships between their individual talents as teachers and scholars, the obligations of their department as a community nested with others contributing to the university mission, and the role and responsibility of their university and discipline in the wider society. The themes of balance and harmony underpin this book's approach to faculty development. *Thriving in an Academic Career* is for anyone beginning their academic career in geography and related social and environmental sciences at all types of higher education institutions. This book will be of particular interest to graduate students and early career faculty in geography and nearby social, environmental, and natural sciences.

Congress. House. Committee on Appropriations. Subcommittee on Energy and Water Development, 2008 **Hydrology of Small Watersheds** P. V. Seethapathi, Debapriya Dutta, Rachapudi Siva Kumar, 2008-01-01 With the adoption of the 73rd and 74th amendments, the emphasis of Indian planning is currently on local level development and planning. In this context, assessment, management, and utilization of natural resources, especially land and water at the local level, assume prime importance. For planning, development, and implementation of rural development programmes at the local level, the small watershed has been accepted as an integrated natural unit. Planning and development of small watersheds call for rigorous understanding about the occurrence and movement of water in the surface and sub-surface systems, along with soil and nutrient losses. Realizing the importance of the problem and gaps in understanding small watershed hydrology in Indian catchments, the coordinated programme on Hydrology of Small Watersheds was launched by the Department of Science and Technology, Government of India, under its NRDMS (Natural Resources Data Management System) programme in 1997. The coordinated programme aims at the investigations on different phases of the hydrologic cycle in small watersheds of five different agro-climatic regions of India and develops database and decision support systems. Hydrology of Small Watersheds has emanated out of the experiences and lessons learnt from the coordinated programme.

Integrated Watershed Management H. M. Gregersen, Peter F. Ffolliott, Kenneth N. Brooks, 2007 As human populations expand and demands upon natural resources

increase the need to manage the environments in which people live becomes more important but also more difficult Land and water management is especially critical as the use of upstream watersheds can drastically affect large numbers of people living in downstream watersheds An integrated approach that stresses both the importance of participatory planning and the institutional and technical constraints and opportunities is therefore necessary The institutional and technical context for managing watersheds and river basins including the involvement of both the public and private sectors is also examined

Thambidurai,Anil Kumar Dikshit,2023-03-02 This book documents the various impacts of urbanization on hydrological systems and water resources The first half of the book is focused on urbanization and surface waters starting with the status of hydrological systems in the urban areas i e the catchment characteristics and changes in rainfall dynamics The most pronounced hydrological problems in cities are changes in runoff due to precipitation Recently rain events have been less frequent but more intense sometimes leading to flash floods Though the substantial increase in runoff causes floods in the urbanized area it may be attributed to the reduction of infiltration due to construction of roads This in turn results in groundwater decline and depletion The second half of the book covers the impact of urbanization on groundwater which starts with hindered or significantly reduced recharge taking place due to altered urban surfaces The limited groundwater resources are over exploited by the urban population leading to water scarcity and depletion Groundwater gets polluted due to solid waste dumping sites or by wastewaters discharged by industries The book will be useful for researchers educators municipal city authorities government officials and NGOs
