

6. Remove odometer drive gear shaft by sliding shaft slightly to left and up.

7. Remove third worm gear cover plate screw, remove plate, and lift out third gear (blue plastic).

**NOTE:** Further disassembly requires removal of field plate and speed cup assembly and subsequent recalibration of speedometer. Repairs needing disassembly beyond this point should be referred to a United Motors Service Station.

#### **b. Assembly**

1. Install third worm gear (blue plastic), cover plate and retain with screw.

2. Install odometer drive gear shaft.

3. Install trip odometer, making sure slotted projections of pinion carriers fit in positioning slot in frame. Secure odometer drive gear shaft and trip odometer with retainer plate and screw.

4. Set mileage recorded during disassembly and install season odometer, making sure slotted projections of pinion carriers fit in positioning slots in frame. Secure with retainer plate and screw.

5. Install speedometer dial and secure with two screws.

6. Position pointer on spindle so that it points at approximately 30 mph and gently twist back to "0" mph while pressing down lightly. Tap pointer lightly with handle end of screwdriver to secure.

7. Check for secure pointer to spindle contact by inserting a short piece of speedometer cable with proper tip in drive end of speedometer. An initial fast spin of test cable should swing pointer to approximately 30 mph and then briskly return to "0". Perform this test several times. If pointer becomes loose on spindle, repeat step 6.

8. If during the performance of step 7, pointer returns to "0" intermittently or not at all, this indicates a speed cup and magnet assembly defect which should be referred to a United Motors Service Station.

9. Reinstall rubber washers and grommets that may have been removed or fallen out.

10. Install generator tell tale lens intensifier if it has fallen out.

11. Install speedometer head assembly as described in Note 59b.

### **61. Oil Pressure Indicator Service**

The "telltale" oil pressure indicator light is

connected in a circuit with the ignition switch and a pressure operated switch, which is threaded into the oil header galley at the rear of the engine. The indicator light warns the driver when the oil pressure is below seven pounds.

If the light does not come on when the ignition switch is turned on, or if the light stays on after the engine is started, either the pressure is low or one of the units or the wiring is defective and should be checked as follows:

#### **a. Light On—Engine Running**

1. Circuit grounded between "telltale" light and oil pressure switch.

2. Switch shorted. Replace switch.

3. Switch improperly calibrated. Increase engine speed slightly and check to see if light goes off with increased pressure. Replace switch.

4. Oil pressure too low. Remove switch and test pressure with a reliable pressure gage. Repair as necessary.

#### **b. Ignition On—Engine Not Running—Light Off**

1. Bulb burned out. Replace bulb.

2. Open circuit between ignition switch and light or light and pressure switch.

3. Switch not grounded. Check for presence of sealing compound on threads of switch.

4. Switch stuck. Replace switch.

### **62. Directional Signal Operation**

The directional indicator control lever is mounted on the left side of the steering column and the switch is located below the steering wheel hub. The switch that operates the front fender cornering lights is integral with the directional signal switch. It is part of the switch block included in the switch assembly and is serviced with the switch. The flasher unit is located on the upper side of the fuse block mounting bracket to the left of the instrument panel support.

The turn signal indicators are located at the forward end of the front fender crown moldings. When the signal lever is moved, the corresponding indicator flashes rearward. When either turn signal is operating with the headlights or parking lights "On", the corresponding cornering light beams to that side of the road.

When a right turn is to be signaled, the signal lever is moved upward and the right front parking lamp, the right rear bumper lamp, and indicator on the right front fender begin flashing. If the headlights or parking lights are "On", the right
