

## Engine Interface Module

The Engine Interface Module is a sealed, engine mounted module that provides switching relays for the Starter Motor Solenoid, Glow Plug and Fuel Solenoid. Each of these circuits is protected with individual automotive fuses mounted in the module. Individual LED's illuminate when each circuit is energized in addition these LED's greatly aid when fault finding.

This module is mounted on the engine with anti-vibration mounts and is easily connected to the engine via loom plugs. Use of the EIM means that heavy currents such as Fuel Solenoid power are isolated from the control panel thus enabling individual protection of each of the circuits.

## Functional Description

There are four versions of the Engine Interface Module available - the 12/24 volt EIM SR and the 12/24 volt EIM Plus.

The EIM SR is the basic level module that provides all the switching functionality, the EIM Plus provides the same functionality as the EIM SR plus the additional feature of Overspeed Sensing and an Overspeed Trip Adjuster. A magnetic pick-up on the engine flywheel housing provides the speed signal to the EIM Plus. When an overspeed situation is sensed, the EIM Plus signals the 2001, 4001 or 4001E generator set control panel to stop the engine. The Overspeed Trip Point can be easily set-up for 10% above the normal operating speed.

The overspeed feature on the EIM Plus, including the magnetic pickup is mandatory for all the Autostart control panels except the Access 4000 (2001, 4001 and 4001E).
