#### Familiarization

Your miter saw is fully assembled in the carton. Open the box and slide the saw out, as shown in Figure 2.

Place the saw on a smooth, flat surface such as a workbench or strong table.

Examine Figure 4 to become familiar with the saw and its various parts. The section on adjustments will refer to these labels and parts.

**CAUTION:** Finish Hazard. To reduce the risk of injury, keep hands underneath the handle when pulling the handle down. The lower guard will move up as the handle is pulled down which could cause pinching. The handle is placed close to the guard for special cuts.

Press down on the handle, always operating the lock-down pin. Gently release the

downward pressure and hold the arm allowing it to rise to its full height. Use the lock down pin when carrying the saw from one place to another. Always use the carrying handle to transport the saw or the hand indentations shown in Figure 4.

#### Bench Mounting

Holes are provided in all 4 feet to facilitate bench mounting, as shown in Figure 4. (Two different sized holes are provided to accommodate different sizes of screws. Use either hole, it is not necessary to use them.) Always mount your saw firmly to a stable surface to prevent movement.

To enhance the tool's portability, it can be mounted to a piece of 1/2" (12.7 mm) or thicker plywood which can then be clamped to your work support or moved to other job sites and re-clamped.

**NOTE:** If you elect to mount your saw to a piece of plywood, make sure that the mounting screws don't protrude from the bottom of the wood. The plywood must sit flush on the work support.

When clamping the saw to any clamping device, clamp only on the clamping device when the mounting screws holes are located. Clamping at any other point will surely interfere with the proper operation of the saw.

**CAUTION:** To prevent binding and inaccuracy, be sure the mounting surface is not warped or otherwise uneven. If the saw rocks on the surface place a thin piece of material under one saw foot until the saw sits level on the mounting surface.

#### IMPORTANT SAFETY INSTRUCTIONS

##### Changing or Installing a New Saw Blade (Fig. 3)

**WARNING:** To reduce the risk of serious personal injury, turn off the tool and disconnect it from the power source before attempting to move it, change accessories or make any adjustments except as written in lower adjustment instructions.

##### CAUTION:

- Never depress the spindle lock button while the blade is under power or coasting.
- Do not cut ferrous metal containing iron or steel or masonry or their cement product with this miter saw.

##### Removing the Blade

- Unplug the saw.
- Raise the arm to the upper position and raise the lower guard (4) as far as possible.
- Loosen (1), but do not remove guard bracket screw (2) until the bracket can be raised far enough to access the blade screws. Lower guard will remain raised due to the position of the guard bracket screw.
- Depress the spindle lock button (3) while carefully rotating the saw blade by hand until the lock engages.
- Keeping the button depressed, use the other hand and the wrench provided (5) to loosen the blade screw. (Turn clockwise, left hand threads.)
- Remove the blade screw (3), outer blade clamp (5) and blade (2). The inner blade clamp (4) may be left on the spindle.

##### Installing a Blade

- Unplug the saw.
- With the arm raised, the lower guard held open and the guard bracket raised, place the blade with the wider and wider angle blade clamp (5) with the teeth at the bottom of the blade pointing toward the back of the saw.
- Assemble the outer blade clamp onto the spindle.
- Install the blade screw and tighten the spindle lock. Tighten the screw firmly with wrench provided. (Turn counterclockwise, left hand threads.)
- Return the guard bracket to its original position and firmly tighten the guard bracket screws to hold bracket in place.

##### A WARNING:

- The guard bracket must be returned to its original position and the screw tightened before activating the saw.
- Failure to do so may allow the guard to contact the spinning saw blade resulting in damage to the saw and severe personal injury.

##### Transporting the Saw

**WARNING:** To reduce the risk of serious personal injury, turn off the tool and disconnect it from the power source before attempting to move it, change accessories or make any adjustments except as written in lower adjustment instructions.

**WARNING:** To reduce the risk of serious personal injury, ALWAYS lock the rail lock knob, miter lock handle, bevel lock handle, lock down pin and fence adjustment knobs before transporting saw.

In order to conveniently carry the miter saw from place to place, a carrying handle has been included on the front of the saw arm and hand indentations in the base, as shown in Figure 4.

##### ADJUSTMENTS

**WARNING:** To reduce the risk of serious personal injury, turn off the tool and disconnect it from the power source before attempting to move it, change accessories or make any adjustments except as written in lower adjustment instructions.

**NOTE:** Your miter saw is fully and accurately adjusted at the factory at the time of manufacture. If readjustment due to shipping and handling or any other reason is required, follow the steps below to adjust your saw.

Once made, these adjustments should remain accurate. Take a little time now to follow these directions carefully to maintain the accuracy of which your saw is capable.

##### MITER SCALE ADJUSTMENT (FIG. 5)

Place a square against the saw's fence and blade, as shown. (Do not touch the tips of the blade teeth with the square.) To adjust the miter scale, loosen the miter lock handle and swing the miter arm until the miter lock locks it at the 0° miter position. Do not tighten the lock handle. If the saw blade is not exactly perpendicular to the fence, loosen the four screws that hold the miter scale left or right until the blade is perpendicular to the fence, as measured with the square. Retighten the four screws. Pay no attention to the reading of the miter pointer at this time.

##### MITER POINTER ADJUSTMENT (FIG. 6)

Loosen the miter lock handle and swing the miter arm to the zero position. With the miter lock handle loose allow the miter lock to snap into place as you rotate the miter arm to zero. Observe the pointer and miter scale shown in Figure 6. If the pointer does not indicate exactly zero, loosen the inner holding the pointer in place, and adjust the screw.

##### BEVEL SQUARE TO TABLE ADJUSTMENT (FIG. 8)

To align the blade square to the table, lock the arm in the down position. Place a square against the blade and table taking care to have the square not touch a blade tooth. Loosen the bevel lock handle and rotate the bevel lock into place at 0°. If the saw blade is not exactly perpendicular to the table, loosen the left and right bevel plate lock nuts which hold the bevel plate to the table. Adjust to allow slight drag between the bevel plate and table. Gently tap the motor housing or the belt cover to move the plate into place. Tighten the bevel lock handle. Tighten both bevel plate lock nuts.
