

Maths at University Interview Questions

Below is a list of questions that have been asked at interviews (mainly at Oxford/Cambridge, but also other universities too).

Sometimes the interviewer will gently ask such things as:

- Tell us about some maths books that you have been reading.
- Why do you want to study maths?
- What areas of maths do you like? (this is a prompt for the next question which will be on that topic!)

Mainly (particularly at Oxford/Cambridge) there is little or no gentle chit chat, and straight into the fun stuff like:

- Which is bigger 2^x or x^2 ?
- Draw $y = A(1 - e^{-Bx})^2$
- Differentiate $y = x^{\sin x}$
- Find an approximation to $1^4 + 2^4 + 3^4 + \dots + 100^4$
- Draw $y = \frac{e^\theta}{1 + e^\theta} \sin \theta$ and $x = \frac{e^\theta}{1 + e^\theta} \cos \theta$
- Draw $y = \cos x^{\cos x}$
- Prove $\frac{a}{b} + \frac{b}{a} \geq 2$
- Draw: $y = e^x$, $y = e^{-x}$, $y = \frac{e^x + e^{-x}}{2}$
- Draw $y = \frac{\sin x}{x}$
- Prove $n^7 - n$ is always divisible by 42.
- $(6 + \sqrt{37})^{20} = 4398704651 \dots \bullet 9999999999 437569 \dots$
Can you show why this number is so close to an integer?
- On a plane each individual point can be either red, white or blue. Prove that at some point on the plane two points will be at a distance of one unit apart and the same colour.

the Effectiveness of Remediation in Employment and Training Programs for Youth Robin Morris, Lori Strumpf, Susan P. Curnan, 1988 **Manpower**, 1971 *Foundations of Psychological Testing* Sandra A. McIntire, Leslie A. Miller, 2007 I used McIntire and Miller's book on testing in my research course two years ago. Students loved this book for its clarity and personality. It is hard to imagine how the authors could have improved on the First Edition. Nevertheless, this new edition of the *Foundations of Psychological Testing* is better than any of its competitors. The authors should be congratulated for making a topic that has been formidable to students in the past much more accessible to today's students. Douglas Herrmann, Emeritus Professor, Indiana State University, Director of Research, Practical Memory Institute. The Second Edition of *Foundations of Psychological Testing* is a scholarly yet pragmatic and easy to understand text for undergraduate students new to the field of psychological testing. Using an engaging conversational format, the authors aim to prepare students to be informed consumers as test users or test takers, not to teach students to administer or interpret individual psychological tests. New to the Second Edition: Incorporates new content. This edition includes a new chapter on computerized testing and is updated throughout to reflect new research tests and examples. Offers new learning strategies. To further promote student comprehension, new and enhanced learning aids include a blueprint of text material, In the News and On the Web boxes, Test Spotlights, and an Engaging in the Learning Process section at the end of each chapter with learning activities, study tips, and practice test questions. Encourages instruction through conversation. In response to students' requests to simplify complex concepts, the authors use an easy-to-read conversational style. This format clearly and concisely communicates the basics of psychological testing and relates these basics to practical situations that students can recognize and embrace. Instructor Resources on CD are available to qualified adopters, including chapter outlines, discussion questions, teaching tips, review questions, and more.
