Proof and Other Dilemmas Bonnie Gold,Roger A. Simons,2008 During the first 75 years of the twentieth century almost all work in the philosophy of mathematics concerned foundational questions In the last quarter of the century philosophers of mathematics began to return to basic questions concerning the philosophy of mathematics such as what is the nature of mathematical knowledge and of mathematical objects and how is mathematics related to science Two new schools of philosophy of mathematics social constructivism and structuralism were added to the four traditional views formalism intuitionism logicism and platonism The advent of the computer led to proofs and the development of mathematics assisted by computer and to questions of the role of the computer in mathematics This book of 16 essays all written specifically for this volume is the first to explore this range of new developments in a language accessible to mathematicians Approximately half the essays were written by mathematicians and consider questions that philosophers are not yet discussing The other half written by philosophers of mathematics summarize the discussion in that community during the last 35 years In each case a connection is made to issues relevant to the teach of mathematics

Spoken and Written Discourse in Online Interactions Maria Grazia Sindoni,2014-04-24 Winner of the AIA Book Prize for a research monograph in the field of English Language and Linguistics 2016 Common patterns of interactions are altered in the digital world and new patterns of communication have emerged challenging previous notions of what communication actually is in the contemporary age Online configurations of interaction such as video chats blogging and social networking practices demand profound rethinking of the categories of linguistic analysis given the blurring of traditional distinctions between oral and written discourse in digital texts This volume reconsiders underlying linguistic and

semiotic frameworks of analysis of spoken and written discourse in the light of the new paradigms of online communication in keeping with a multimodal corpus linguistics theoretical framework Typical modes of online interaction encompass speech writing gesture movement gaze and social distance This is nothing new but here Sindoni asserts that all these modes are integrated in unprecedented ways enacting new interactional patterns and new systems of interpretation among web users These non verbal modes have been sidelined by mainstream linguistics whereas accounting for the complexity of new genres and making sense of their educational impact is high on this volume's agenda Sindoni analyzes other new phenomena ranging from the intimate sphere i.e. video chats personal blogs or journals on social networking websites to the public arena i.e. global scale transmission of information and knowledge in public blogs or media sharing communities shedding light on the rapidly changing global web scenario

Advances in Language and Education Anne McCabe, Mick O'Donnell, Rachel Whittaker, 2007-07-19
This book examines new functional approaches to language and education and the impact of these on literacy in the classroom. The first section looks at issues of multimodality in which the definition of a text is expanded to include not only that which is written down but also the interaction of writing, graphics and audiovisual material. The contributors explore ways in which language education can be expanded to deal with multimodal discourse whether in children's books, in textbooks or on the web. The second section looks at how critical discourse analysis and appraisal theory can be used as tools for assessing the effectiveness of student writing and literacy achievement and also for helping developing writers to write more successfully. The final section argues that corpus based studies of language have changed the way we see language and that the way we teach language should evolve in line with these changes. This appealing survey of new directions in language and education includes contributions from internationally renowned scholars. It will be of interest to researchers in systemic functional linguistics or language and education.

New Perspectives on Narrative and Multimodality Ruth Page, 2009-09-10
This study investigates the richly diverse but integrated semiotic potential of storytelling. Unlike other interdisciplinary approaches to narrative studies which have privileged the study of words in storytelling, this unique collection provides a much needed analysis of how narrative operates using combinations of visual, typographic, aural, gestural and haptic resources. Although both multimodal theory and narrative studies have been invigorated by a variety of theoretical approaches, this volume seeks to avoid a single dominant paradigm. Instead, the contributors use literary criticism, linguistics and new media frameworks in a series of critical studies that are directly engaged with a range of multimodal stories. The contributors analyze works that include oral accounts of personal experience, opera, cartoons, print literature and new media forms of storytelling such as experimental digital fiction and fanfiction.

Multimodality in Practice Sigrid Norris, 2012-05-22
In this wide ranging collection, contributors present examples of multimodal discourse analysis in practice. The book illustrates new theoretical, methodological and empirical research into new technologies such as the internet, software, CD, ROM, video and older technologies such as film, newspapers, brands or billboards. Each chapter demonstrates how aspects of multimodal theory and method can be used to conduct research into these and other multimodal texts.
