**Part 2** László T. Kóczy,Jesús Medina-Moreno,Eloísa Ramírez-Poussa,2018-11-02 This book presents recent research in the field of interaction between computational intelligence and mathematics In the current technological age we face the challenges of tackling very complex problems in the usual sense but also in the mathematical and theoretical computer science sense However even the most up to date results in mathematics are unable to provide exact solutions of such problems and no further technical advances will ever make it possible to find general and exact solutions Constantly developing technologies including social technologies necessitate handling very complex problems This has led to a search for acceptably good or precise solutions which can be achieved by the combination of traditional mathematical techniques and computational intelligence tools in order to solve the various problems emerging in many different areas to a satisfactory degree Important funding programs such as the European Commission s current framework programme for research and

innovation Horizon 2020 are devoted to the development of new instruments to deal with the current challenges Without doubt research topics associated with the interactions between computational intelligence and traditional mathematics play a key role Presenting contributions from engineers scientists and mathematicians this book offers a series of novel solutions for meaningful and real world problems that connect those research areas      *Time and frequency users' manual* Institute for Basic Standards (U.S.).
