By asking a few simple follow up questions teachers can learn a great deal about student understanding and make better more informed instructional decisions. The *Beyond the Bubble* books grades 2-3 and grades 4-5 are each divided into five strands: number, measurement, algebra, geometry, and probability, with six problems per strand. Each problem includes an overview of the objective of the test question, a sample question typical of those found on standardized tests, strategies students employ to solve the problem, conversation starters, student work, student teacher conversations, and instructional strategies to advance student learning. Teachers will also find suggestions for differentiation, reproducible of sample questions, and a comprehensive list of additional resources. Elementary and Middle School Mathematics John A. Van de Walle, 1998. John A. Van de Walle has written a book that helps readers make sense of mathematics and become confident in their ability to teach mathematics to children K to 8. Elementary and Middle School Mathematics consists of 16 chapters reflecting the view that all mathematics can be taught through a problem solving approach that motivates children and builds their confidence as they learn. This book thoroughly discusses the new standards and clearly develops four key aspects of teaching mathematics: the nature of mathematics as a science of pattern and order, an understanding of how children learn mathematics, a problem solving view of teaching mathematics, and specific methods for integrating assessment with instruction. Simple yet effective classroom activities are woven throughout the chapters, as well as suggestions for technology and literature.
