Mathematical Linguistics Advanced Information And Knowledge Processing:

Mathematical Linguistics Andras Kornai, 2007-11-10 Mathematical Linguistics introduces the mathematical foundations of linguistics to computer scientists engineers and mathematicians interested in natural language processing The book presents linguistics as a cumulative body of knowledge from the ground up no prior knowledge of linguistics is assumed As the first textbook of its kind this book is useful for those in information science and in natural language technologies

Computational Science and its Applications A. H. Siddiqi, R. C. Singh, G. D. Veerappa Gowda, 2020-10-20

Computational science is a rapidly growing multidisciplinary field concerned with the design implementation and use of mathematical models to analyze and solve real world problems It is an area of science that spans many disciplines and which involves the development of models and allows the use of computers to perform simulations or numerical analysis to understand problems that are computational and theoretical Computational Science and its Applications provides an opportunity for readers to develop abilities to pose and solve problems that combine insights from one or more disciplines from the natural sciences with mathematical tools and computational skills This requires a unique combination of applied and theoretical knowledge and skills The topics covered in this edited book are applications of wavelet and fractals modeling by partial differential equations on flat structure as well as on graphs and networks computational linguistics prediction of natural calamities and diseases like epilepsy seizure heart attack stroke biometrics modeling through inverse problems interdisciplinary topics of physics mathematics and medical science and modeling of terrorist attacks and human behavior The focus of this book is not to educate computer specialists but to provide readers with a solid understanding of basic science as well as an integrated knowledge on how to use essential methods from computational science Features Modeling of complex systems Cognitive computing systems for real world problems Presentation of inverse problems in medical science and their numerical solutions Challenging research problems in many areas of computational science This book could be used as a reference book for researchers working in theoretical research as well as those who are doing modeling and simulation in such disciplines as physics biology geoscience and mathematics and those who have a background in computational science

Interpreted Languages and Compositionality Marcus Kracht, 2011-08-06 This book argues that languages are composed of sets of signs rather than strings This notion first posited by de Saussure in the early 20th century has for decades been neglected by linguists particularly following Chomsky's heavy critiques of the 1950s Yet since the emergence of formal semantics in the 1970s the issue of compositionality has gained traction in the theoretical debate becoming a selling point for linguistic theories Yet the concept of compositionality itself remains ill defined an issue this book addresses Positioning compositionality as a cornerstone in linguistic theory it argues that contrary to widely held beliefs there exist non compositional languages which shows that the concept of compositionality has empirical content The author asserts that the existence of syntactic structure can flow from the fact that a compositional grammar cannot be delivered

without prior agreement on the syntactic structure of the constituents

Secure Information Management Using Linguistic Threshold Approach Marek R. Ogiela, Urszula Ogiela, 2013-08-19 In recent years cryptographic techniques for protecting and hiding secret information have been included in directions of research on intelligent information management Data can be managed securely due to the use of algorithms for ensuring the confidentiality of data information splitting techniques as well as protocols for sharing information and methods of its reconstruction This is why techniques of advanced splitting and reconstruction of information form the primary subject of Secure Information Management Using Linguistic Threshold Approach whose main purpose is to discuss the so called linguistic threshold schemes for information sharing An attempt is also made to describe the opportunities of using these techniques to create new models of managing strategic information shared within a commercial organisation or a state institution Such information is specially protected and its contents are used only if the authorised users are enabled to access it This monograph attempts to define a model structure of information flow and for assigning information shares to particular groups of individuals concerned The proposed information flow model can be integrated into practical solutions within any organisation or institution improving the functionality of its legacy information systems The use of strong mathematical cryptographic models to manage information constitutes a scientific innovation and a demonstration of the methods and opportunities of using advanced techniques for confidentially exchanging information in tasks supporting data flow within a commercial organisation The interdisciplinary nature of the solutions proposed means that the subject of linguistic threshold schemes forming part of intelligent information management becomes a new challenge for the research and application work carried out The authors of this monograph hope that it will guide readers on an interesting journey through the cutting edge solution in the field of secure information management

Vocabulary Knowledge Scott Jarvis, Michael Daller, 2013-08-14 Language researchers and practitioners often adopt tools and techniques without testing whether they really work as they should This is understandable because most scholars do not have the time or expertise to properly evaluate the usefulness of all instruments measures and methods they need It is therefore critical to have problem solvers in the field who gain the necessary expertise and take the time to scrutinize existing methods identify problems and offer new solutions This volume represents the work of scholars who have done this it is a collection of the latest advances developments and innovations regarding the modeling and measurement of learners vocabulary growth curves current levels of vocabulary knowledge and lexical proficiency and the patterns of lexical diversity found in their language production Several of the contributors also address the complex but important relationship between automated indices and human judgments of learners lexical patterns and abilities
