1.2.9 (d) Circular cross section means that  $P = 2\pi r$ ,  $A = \pi r^2$ , and thus  $P/A = 2/r$ , where  $r$  is the radius. Also  $\gamma = 0$ .

1.2.9 (e)  $u(x, t) = u(r)$  implies that

$$c\rho \frac{du}{dt} = -\frac{2h}{r}u.$$

The solution of this first-order linear differential equation with constant coefficients, which satisfies the initial condition  $u(0) = u_0$ , is

$$u(t) = u_0 \exp\left[-\frac{2h}{c\rho r}t\right].$$

## Section 1.3

1.3.2  $\partial u/\partial x$  is continuous if  $K_0(x_0-) = K_0(x_0+)$ , that is, if the conductivity is continuous.

## Section 1.4

1.4.1 (a) Equilibrium satisfies (1.4.14),  $d^2u/dx^2 = 0$ , whose general solution is (1.4.17),  $u = c_1 + c_2x$ . The boundary condition  $u(0) = 0$  implies  $c_1 = 0$  and  $u(L) = T$  implies  $c_2 = T/L$  so that  $u = Tx/L$ .

1.4.1 (d) Equilibrium satisfies (1.4.14),  $d^2u/dx^2 = 0$ , whose general solution (1.4.17),  $u = c_1 + c_2x$ . From the boundary conditions,  $u(0) = T$  yields  $T = c_1$  and  $du/dx(L) = \alpha$  yields  $\alpha = c_2$ . Thus  $u = T + \alpha x$ .

1.4.1 (f) In equilibrium, (1.2.9) becomes  $d^2u/dx^2 = -Q/K_0 = -x^2$ , whose general solution (by integrating twice) is  $u = -x^4/12 + c_1 + c_2x$ . The boundary condition  $u(0) = T$  yields  $c_1 = T$ , while  $du/dx(L) = 0$  yields  $c_2 = L^3/3$ . Thus  $u = -x^4/12 + L^3x/3 + T$ .

1.4.1 (h) Equilibrium satisfies  $d^2u/dx^2 = 0$ . One integration yields  $du/dx = c_2$ , the second integration yields the general solution  $u = c_1 + c_2x$ .

$$x = 0 : c_2 - (c_1 - T) = 0$$

$$x = L : c_2 = \alpha \text{ and thus } c_1 = T + \alpha.$$

Therefore,  $u = (T + \alpha) + \alpha x = T + \alpha(x + 1)$ .

1.4.7 (a) For equilibrium:

$$\frac{d^2u}{dx^2} = -1 \text{ implies } u = -\frac{x^2}{2} + c_1x + c_2 \text{ and } \frac{du}{dx} = -x + c_1.$$

*Rasch Models* Gerhard H. Fischer, Ivo W. Molenaar, 2012-12-06 Thirty two years after the publication of the legendary Rasch book Rasch 1960 the rich literature on the Rasch model and its extensions was scattered in journals and many less accessible sources including grey literature When asked by students or junior researchers for references to the Rasch model it was a typical reaction on the part of the editors to state that it was difficult to name one or just a few actually only a whole list of references differing in notation and level of formal abstraction seemed to meet the request in most cases Therefore in 1992 the editors decided to invite a number of outstanding authors in the field of Rasch modeling to contribute to a book presenting the current state of knowledge about Rasch models The aim was not just to collect a number of papers on the subject rather to produce a well organized monograph To this end a workshop was held in Vienna from 25 to 27 February 1993 in which after a process of mutual reviewing drafts of all chapters were read and discussed by all authors leading to a more systematic organization of the topics treated in unified notation and terminology The workshop was sponsored by the University of Vienna here the editors would like to express their thanks in the name of all contributors both for the financial support and for the hospitality granted

**Rasch Models for Measurement** David Andrich, 1988 Examines the use of Rasch measurement models in the social sciences This lucid introduction first focuses on general principles so the applications and algebra of the model can be readily understood Andrich then connects Rasch models to common procedures for social science measurement Avoiding polemics Andrich's presentation allows comparison between the Rasch models and other better known measurement approaches Rasch Models For Measurement concentrates on the simple logistic model the most elementary and commonly used of the Rasch models This excellent introduction uses one example from personality inventory throughout to provide continuity as the procedures and statistical arguments are explained Essential reading for all researchers and students who use measurement models A

valuable asset to those of us who are concerned with teaching measurement issues My only quibble is that we have had to wait so long for what is a clear concise and very approachable introduction to a fairly complex area For its size this volume covers a lot of ground and it would seem to be an ideal book for postgraduate students with a special interest in psychometrics and professional psychologists who are concerned with measurement and assessment An ideal primer The Statistician Rasch Models for Measurement is a concise introduction to the general principles philosophy and methods that underlie the approach to measurement developed by Georg Rasch 1960 1980 This book is a welcome addition to the Sage series on Quantitative Applications in the Social Sciences or as my students describe them the little green books This series introduces methodological issues for individuals with limited backgrounds in statistics and mathematics and Andrich has provided a useful resource for these individuals This book can be recommended for graduate students and colleagues who want a basic understanding of the Rasch model Applied Psychological Measurement **Computerized Adaptive and**
