Multivariate Public Key Cryptosystems Jintai Ding,Jason E. Gower,Dieter S. Schmidt,2006-11-24 Multivariate public key cryptosystems MPKC is a fast developing new area in cryptography In the past 10 years MPKC schemes have increasingly been seen as a possible alternative to number theoretic based cryptosystems such as RSA as they are generally

more efficient in terms of computational effort As quantum computers are developed MPKC will become a necessary alternative Multivariate Public Key Cryptosystems systematically presents the subject matter for a broad audience Information security experts in industry can use the book as a guide for understanding what is needed to implement these cryptosystems for practical applications and researchers in both computer science and mathematics will find this book a good starting point for exploring this new field It is also suitable as a textbook for advanced level students Written more from a computational perspective the authors provide the necessary mathematical theory behind MPKC students with some previous exposure to abstract algebra will be well prepared to read and understand the material *El-Hi Textbooks in Print*,1982 **A History of Mathematical Notations: Notations in elementary mathematics** Florian Cajori,1928 **The Academy**,1892 **Current Catalog** National Library of Medicine (U.S.),1980 Includes subject section name section and 1968 1970 technical reports **Positive Solutions to Indefinite Problems** Guglielmo Feltrin,2018-11-23 This book is devoted to the study of positive solutions to indefinite problems The monograph intelligibly provides an extensive overview of topological methods and introduces new ideas and results Sticking to the one dimensional setting the author shows that compelling and substantial research can be obtained and presented in a penetrable way In particular the book focuses on second order nonlinear differential equations It analyzes the Dirichlet Neumann and periodic boundary value problems associated with the equation and provides existence nonexistence and multiplicity results for positive solutions The author proposes a new approach based on topological degree theory that allows him to answer some open questions and solve a conjecture about the dependence of the number of positive solutions on the nodal behaviour of the nonlinear term of the equation The new technique developed in the book gives as a byproduct infinitely many subharmonic solutions and globally defined positive solutions with chaotic behaviour Furthermore some future directions for research open questions and interesting unexplored topics of investigation are proposed *India*,1811
