Matheuristics Vittorio Maniezzo, Thomas Stützle, Stefan Voß, 2009-09-18 Metaheuristics support managers in decision making with robust tools that provide high quality solutions to important applications in business engineering economics and science in reasonable time frames but finding exact solutions in these applications still poses a real challenge However because of advances in the fields of mathematical optimization and metaheuristics major efforts have been made on their interface regarding efficient hybridization This edited book will provide a survey of the state of the art in this field by providing some invited reviews by well known specialists as well as refereed papers from the second Matheuristics workshop to be held in Bertinoro Italy June 2008 Papers will explore mathematical programming techniques in metaheuristics frameworks and especially focus on the latest developments in Mixed Integer Programming in solving real world problems

Borrego, 2020-04-02 Better urban transport systems are needed to achieve a healthier environment and as a result a wide range of research has originated from many different countries These studies highlight the importance of innovative systems new approaches and original ideas which need to be thoroughly tested and critically evaluated before they can be implemented in practice To address the need to solve important pollution problems the papers included in this book focus on the relationship with urban transport There is also a growing need for integration with telecommunications systems and IT applications in order to improve safety security and efficiency The variety of topics covered in this volume reflects the complex interaction of the urban transport systems with their environment and the need to establish integrated strategies The aim is to arrive at optimal socio economic solutions while reducing the negative environmental impacts of current transportation systems **Hybrid Optimization** Pascal van Hentenryck, Michela Milano, 2010-11-05 Hybrid Optimization focuses on the application of artificial intelligence and operations research techniques to constraint programming for solving combinatorial optimization problems This book covers the most relevant topics investigated in the last ten years by leading experts in the field and speculates about future directions for research This book includes contributions by experts from different but related areas of research including constraint programming decision theory operations research SAT artificial intelligence as well as others These diverse perspectives are actively combined and contrasted in order to evaluate their relative advantages This volume presents techniques for hybrid modeling integrated solving strategies including global constraints decomposition techniques use of relaxations and search strategies including tree search local search and metaheuristics Various applications of the techniques presented as well as supplementary computational tools are also discussed **Springer Handbook of Computational Intelligence** Janusz Kacprzyk, Witold Pedrycz, 2015-05-28 The Springer Handbook for Computational Intelligence is the first book covering the basics the state of the art and important applications of the dynamic and rapidly expanding discipline of computational intelligence This comprehensive handbook makes readers familiar with a broad spectrum of approaches to solve various problems in science and technology Possible approaches include for example those being inspired by biology living organisms and animate systems Content is organized in seven parts foundations fuzzy logic rough sets evolutionary computation neural networks swarm intelligence and hybrid computational intelligence systems Each Part is supervised by its own Part Editor s so that high quality content as well as completeness are assured **Handbook of Metaheuristics** Michel Gendreau, Jean-Yves Potvin, 2018-09-20 The third edition of this handbook is designed to provide a broad coverage of the concepts implementations and applications in metaheuristics The book s chapters serve as stand alone presentations giving both the necessary underpinnings as well as practical guides for implementation The nature of metaheuristics invites an analyst to modify basic methods in response to problem characteristics past experiences and

personal preferences and the chapters in this handbook are designed to facilitate this process as well. This new edition has been fully revised and features new chapters on swarm intelligence and automated design of metaheuristics from flexible algorithm frameworks. The authors who have contributed to this volume represent leading figures from the metaheuristic community and are responsible for pioneering contributions to the fields they write about. Their collective work has significantly enriched the field of optimization in general and combinatorial optimization in particular. Metaheuristics are solution methods that orchestrate an interaction between local improvement procedures and higher level strategies to create a process capable of escaping from local optima and performing a robust search of a solution space. In addition, many new and exciting developments and extensions have been observed in the last few years. Hybrids of metaheuristics with other optimization techniques like branch and bound, mathematical programming or constraint programming are also increasingly popular. On the front of applications, metaheuristics are now used to find high quality solutions to an ever growing number of complex, ill-defined real world problems in particular combinatorial ones. This handbook should continue to be a great reference for researchers, graduate students as well as practitioners interested in metaheuristics.
