Warner,2020-01-14 Applied Statistics I Basic Bivariate Techniques has been created from the first half of Rebecca M Warner s popular Applied Statistics From Bivariate Through Multivariate Techniques The author s contemporary approach differs from some of the well worn texts in the market and reflects current thinking in the field It spends less time on statistical significance testing and moves in the direction of the new statistics by focusing more on confidence intervals and effect size Instructors of upper undergraduate or beginning graduate level courses will find that the greater focus on basic concepts such as partition of variance and effect size is more useful to students particularly as preparation for more advanced courses Spending less time on statistical significance testing allows for more time to be devoted to more interesting and useful statistics that students will see in journal articles such as correlation and regression This introductory statistics text includes examples in SPSS together with datasets on an accompanying website A companion study guide reproducing the exercises and examples in R will also be available

**Combat Vehicle Training with Thermal Imagery** Jean L. Dyer,1997 Three training effectiveness experiments were conducted on a computer based thermal combat vehicle identification program developed under the auspices of the Product Manager for Forward Looking Infrared The program included real thermal imagery of vehicles The first experiment compared part task training schedules The second compared a self paced trial procedure which incorporated side by side visual corrective feedback to a timed trial procedure which gave only knowledge of results feedback The third examined the effects of training at near versus far ranges Thermal training substantially improved scores on both thermal and visible images of vehicles that had been trained but not for other vehicles long vehicle sets led to learning plateaus shorter and multiple sets worked better learning was more efficient and transfer was enhanced when soldiers responded at their own pace and received corrective visual feedback Soldiers learned to discriminate vehicles at far ranges although it took them twice as long as soldiers who trained on near imagery Even with extensive training some vehicle confusions persisted indicating great similarity in thermal signatures for some vehicles The findings were applied to the program Efforts are continuing to refine it and to field it throughout the Army DTIC

*Modern Mathematical Statistics with Applications* Jay L. Devore, Kenneth N. Berk, 2011-12-07 Modern Mathematical Statistics with Applications Second Edition strikes a balance between mathematical foundations and statistical practice. In keeping with the recommendation that every math student should study statistics and probability with an emphasis on data analysis, accomplished authors Jay Devore and Kenneth Berk make statistical concepts and methods clear and relevant through careful explanations and a broad range of applications involving real data. The main focus of the book is on presenting and illustrating methods of inferential statistics that are useful in research. It begins with a chapter on descriptive statistics that immediately exposes the reader to real data. The next six chapters develop the probability material that bridges the gap between descriptive and inferential statistics. Point estimation, inferences based on statistical intervals, and hypothesis testing are then introduced in the next three chapters. The remainder of the book explores the use of this methodology in a variety of more complex settings. This edition includes a plethora of new exercises, a number of which are similar to what would be encountered on the actuarial exams that cover probability and statistics. Representative applications include investigating whether the average tip percentage in a particular restaurant exceeds the standard 15%, considering whether the flavor and aroma of Champagne are affected by bottle temperature or type of pour, modeling the relationship between college graduation rate and average SAT
