Space Weather & Telecommunications John M. Goodman,2006-06-02 Space weather has an enormous influence on modern telecommunication systems even though we may not always appreciate it We shall endeavor throughout this monograph to expose the relationships between space weather factors and the performance or lack thereof of telecommunication navigation and surveillance systems Space weather is a rather new term having found an official expression as the result of several government initiatives that use the term in the title of programs But it is the logical consequence of the realization that space also has weather just as the lower atmosphere has weather While the weather in space will influence space systems that operate in that special environment it is also true that space weather will influence systems that we understand and use here on terra firma This brings space weather home as it were It is not some abstract topic of interest to scientists alone it is a topic of concern to all of us I hope to make this clear as the book unfolds Why have I written this book First of all I love the topic While at the Naval Research Laboratory NRL I had the opportunity to do research on many topics including Thomson scatter radar and satellite beacon studies of the ionosphere utilization of the NASA Gemini platform for ionospheric investigations microwave radar propagation studies I F signal intercept and direction finding experiments and multi disciplinary studies of certain physical phenomena relevant to weapon systems development

Government,2017-12-06 This collection reproduces two major Federal documents about space weather the National Space Weather Action Plan and the National Space Weather Strategy issued in October 2015 Space weather events are naturally occurring phenomena that have the potential to disrupt electric power systems satellite aircraft and spacecraft operations telecommunications position navigation and timing services and other technologies and infrastructures that contribute to the Nation s security and economic vitality These critical infrastructures make up a diverse complex interdependent system of systems in which a failure of one could cascade to another Given the importance of reliable electric power and space based assets it is essential that the United States has the ability to protect mitigate respond to and recover from the potentially devastating effects of space weather The National Space Weather

Strategy Strategy released concurrently with this National Space Weather Action Plan Action Plan details national goals for leveraging existing policies and ongoing research and development efforts regarding space weather while promoting enhanced domestic and international coordination and cooperation across public and private sectors The implementation of the Strategy will require the action of a nationwide network of governments agencies emergency managers academia the media the insurance industry nonprofit organizations and the private sector Strong public private partnerships must be established to enhance observing networks conduct research develop prediction models and supply the services necessary to protect life and property and to promote economic prosperity These partnerships will form the backbone of a space weather ready Nation This Action Plan details the activities outcomes and timelines that will be undertaken by Federal departments and agencies for the Nation to make progress toward the Strategy s goals Geomagnetic storms can induce geo electric fields in the Earth s crust driving electric currents in long conductors on or near the Earth s surface These induced geo electric fields present a risk to the reliable operation of electric power systems and may affect gas and oil pipelines railways and other infrastructures that have long conductive paths For example a geo electric field induced by a space weather event can produce electric currents i e geomagnetically induced currents GICs that could affect electric grid system stability with the potential to damage or cause the failure of essential electric power transmission components Depending on the severity of the geomagnetic storm cascading system failure or damage could lead to regional interruptions of electrical power distribution and result in complications with recovery and restoration efforts To be useful geo electric field benchmarks should characterize the induced geo electric field at the Earth s surface E field This parameter can feed directly into vulnerability studies conducted by industry and the private sector
