The First Humans Frederick E. Grine, John G Fleagle, Richard E. Leakey, 2009-05-24 There are some issues in human paleontology that seem to be timeless Most deal with the origin and early evolution of our own genus something about which we should care Some of these issues pertain to taxonomy and systematics How many species of Homo were there in the Pliocene and Pleistocene How do we identify the earliest members the genus Homo If there is more than one Plio Pleistocene species how do they relate to one

another and where and when did they evolve Other issues relate to questions about body size proportions and the functional adaptations of the locomotor skeleton When did the human postcranial Bauplan evolve and for what reasons What behaviors and what behavioral limitations can be inferred from the postcranial bones that have been attributed to Homo habilis and Homo erectus Still other issues relate to growth development and life history strategies and the biological and archeological evidence for diet and behavior in early Homo It is often argued that dietary change played an important role in the origin and early evolution of our genus with stone tools opening up scavenging and hunting opportunities that would have added meat protein to the diet of Homo Still other issues relate to the environmental and climatic context in which this genus evolved

Encyclopedia of Anthropology H. actually seeing it Yet it turns out that people differ hugely in their imaginative experience Some people lack sensory imagery altogether they would be unable to picture their family if asked to but still lead fulfilling even highly creative lives From how we visualise to how we understand the minds of others from the benefits of play to mental disorders The Shape of Things Unseen dazzles and delights It is an essential guide to the latest discoveries about the workings of the human mind
