The Restless Clock Jessica Riskin, 2016-03-10 A wide ranging witty and astonishingly learned scientific and cultural history of the concept of the capacity to act in nature London Review of Books Today a scientific explanation is not meant to ascribe agency to natural phenomena we would not say a rock falls because it seeks the center of the earth Even for living things in the natural sciences and often in the social sciences the same is true A modern botanist would not say that plants pursue sunlight This has not always been the case nor perhaps was it inevitable Since the seventeenth century many thinkers have made agency

in various forms central to science The Restless Clock examines the history of this principle banning agency in the life sciences It also tells the story of dissenters embracing the opposite idea that agency is essential to nature The story begins with the automata of early modern Europe as models for the new science of living things and traces questions of science and agency through Descartes Leibniz Lamarck and Darwin among many others Mechanist science Jessica Riskin shows had an associated theology the argument from design which found evidence for a designer in the mechanisms of nature Rejecting such appeals to a supernatural God the dissenters sought to naturalize agency rather than outsourcing it to a divine engineer Their model cast living things not as passive but as active self making machines The conflict between passive and active mechanist approaches maintains a subterranean life in current science shaping debates in fields such as evolutionary biology cognitive science and artificial intelligence This history promises not only to inform such debates but also our sense of the possibilities for what it means to engage in science and even what it means to be alive Praise for The Restless Clock A wonderful contribution and much needed corrective to the history of European ideas about life and matter Evelyn Fox Keller author of The Mirage of a Space between Nature and Nurture Engrossing and illuminating Nature A sweeping survey of the search for answers to the mystery of life Riskin writes with clarity and wit and the breadth of her scholarship is breathtaking Times Higher Education UK

From Models to Simulations Franck Varenne, 2018-09-03 This book analyses the impact computerization has had on contemporary science and explains the origins technical nature and epistemological consequences of the current decisive interplay between technology and science an intertwining of formalism computation data acquisition data and visualization and how these factors have led to the spread of simulation models since the 1950s Using historical comparative and interpretative case studies from a range of disciplines with a particular emphasis on the case of plant studies the author shows how and why computers data treatment devices and programming languages have occasioned a gradual but irresistible and massive shift from mathematical models to computer simulations The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license

A Guided Tour of Artificial Intelligence Research Pierre Marquis, Odile Papini, Henri Prade, 2020-05-08 The purpose of this book is to provide an overview of AI research ranging from basic work to interfaces and applications with as much emphasis on results as on current issues It is aimed at an audience of master students and Ph D students and can be of interest as well for researchers and engineers who want to know more about AI The book is split into three volumes the first volume brings together twenty three chapters dealing with the foundations of knowledge representation and the formalization of reasoning and learning Volume 1 Knowledge representation reasoning and learning the second volume offers a view of AI in fourteen chapters from the side of the algorithms Volume 2 AI Algorithms the third volume composed of sixteen chapters describes the main interfaces and applications of AI Volume 3 Interfaces and applications of AI This third volume is dedicated to the interfaces of AI with

various fields with which strong links exist either at the methodological or at the applicative levels The foreword of this volume reminds us that AI was born for a large part from cybernetics Chapters are devoted to disciplines that are historically sisters of AI natural language processing pattern recognition and computer vision and robotics Also close and complementary to AI due to their direct links with information are databases the semantic web information retrieval and human computer interaction All these disciplines are privileged places for applications of AI methods This is also the case for bioinformatics biological modeling and computational neurosciences The developments of AI have also led to a dialogue with theoretical computer science in particular regarding computability and complexity Besides AI research and findings have renewed philosophical and epistemological questions while their cognitive validity raises questions to psychology The volume also discusses some of the interactions between science and artistic creation in literature and in music Lastly an epilogue concludes the three volumes of this Guided Tour of AI Research by providing an overview of what has been achieved by AI emphasizing AI as a science and not just as an innovative technology and trying to dispel some misunderstandings

Information Theory And Evolution (2nd Edition) John Scales Avery, 2012-05-21 Information Theory and Evolution discusses the phenomenon of life including its origin and evolution and also human cultural evolution against the background of thermodynamics statistical mechanics and information theory Among the central themes is the seeming contradiction between the second law of thermodynamics and the high degree of order and complexity produced by living systems This paradox has its resolution in the information content of the Gibbs free energy that enters the biosphere from outside sources as the author will show The role of information in human cultural evolution is another focus of the book The first edition of Information Theory and Evolution made a strong impact on thought in the field by bringing together results from many disciplines The new second edition offers updated results based on reports of important new research in several areas

including exciting new studies of the human mitochondrial and Y chromosomal DNA Another extensive discussion featured in the second edition is contained in a new appendix devoted to the relationship of entropy and Gibbs free energy to economics This appendix includes a review of the ideas of Alfred Lotka Frederick Soddy Nicholas Georgescu Roegen and Herman E Daly and discusses the relevance of these ideas to the current economic crisis The new edition discusses current research on the origin of life the distinction between thermodynamic information and cybernetic information new DNA research and human prehistory developments in current information technology and the relationship between entropy and economics

Information Theory And Evolution (Third Edition) John Scales Avery, 2021-11-24 This highly interdisciplinary book discusses the phenomenon of life including its origin and evolution against the background of thermodynamics statistical mechanics and information theory Among the central themes is the seeming contradiction between the second law of thermodynamics and the high degree of order and complexity produced by living systems As the author shows this paradox has its resolution in the information content of the Gibbs free energy that enters the biosphere from outside sources Another focus of the book is the role of information in human cultural evolution which is also discussed with the origin of human linguistic abilities One of the final chapters addresses the merging of information technology and biotechnology into a new discipline bioinformation technology This third edition has been updated to reflect the latest scientific and technological advances Professor Avery makes use of the perspectives of famous scholars such as Professor Noam Chomsky and Nobel Laureates John O Keefe May Britt Moser and Edward Moser to cast light on the evolution of human languages The mechanism of cell differentiation and the rapid acceleration of information technology in the 21st century are also discussed With various research disciplines becoming increasingly interrelated today Information Theory and Evolution provides nuance to the conversation between bioinformatics information technology and pertinent social political issues This book is a welcome voice in working on the future challenges that humanity will face as a result of scientific and technological progress

The Technological Society Jacques Ellul, 2021-07-27 As insightful and wise today as it was when originally published in 1954 Jacques Ellul s *The Technological Society* has become a classic in its field laying the groundwork for all other studies of technology and society that have followed Ellul offers a penetrating analysis of our technological civilization showing how technology which began innocuously enough as a servant of humankind threatens to overthrow humanity itself in its ongoing

creation of an environment that meets its own ends No conversation about the dangers of technology and its unavoidable effects on society can begin without a careful reading of this book A magnificent book He goes through one human activity after another and shows how it has been technicized rendered efficient and diminished in the process Harper s One of the most important books of the second half of the twentieth century In it Jacques Ellul convincingly demonstrates that technology which we continue to conceptualize as the servant of man will overthrow everything that prevents the internal logic of its development including humanity itself unless we take necessary steps to move human society out of the environment that technique is creating to meet its own needs The Nation A description of the way in which technology has become completely autonomous and is in the process of taking over the traditional values of every society without exception subverting and suppressing these values to produce at last a monolithic world culture in which all non technological difference and variety are mere appearance Los Angeles Free Press **Telematic Embrace** Roy Ascott,2003 Annotation Telematic Embrace combines a provocative collection of writings from 1964 to the present by the preeminent artist and art theoretician Roy Ascott with a critical essay by Edward Shanken that situates Ascott s work within a history of ideas in art technology and philosophy
