

## MOBILE INSTRUMENTATION AND PROCESS CONTROL TRAINING SYSTEM, SERIES 3500

### GENERAL DESCRIPTION

The Lab-Volt Mobile Instrumentation and Process Control Training System, Series 3500, consists of self-contained workstations designed for hands-on training in the measurement, control, and troubleshooting of pressure, flow, level, temperature, heat exchange, and analytic processes. The stations can operate independently, or be interconnected into several configurations to simulate complex processes. All processes are sized to be "real-world" in time lag and process response. Process dynamics can be altered by various means to provide several degrees of stability and damping. The Flow, Level, Heat Exchanger, Multi-Process, and Analytic Process Stations utilize water as the process media, while the Pressure

and Temperature Process Stations utilize air. All Process Stations include a microprocessor-based controller, a dual-speed strip chart recorder with single or dual pen, and alarm lamps, with all connections terminated by banana jacks on the station main control panel.

Laboratory Manual for Electronics via Waveform Analysis Edwin C. Craig, 2012-12-06 To the Instructor The purpose of this laboratory manual is not just to help students to set up electronic circuits that function as they should The important thing is the electronic concepts that the student learns in the process of setting up and studying these circuits Quite often a student learns more electronics when he has to trouble shoot a circuit than when the circuit performs as it should when first built It is unlikely that any students would be able to complete all of these experiments in one semester The author believes that all students should have laboratory experiences with power sup plies amplifiers oscillators and integrated circuits Additionallabomtory experiments should be de termined by the instructor Therefore you can choose those that you want done Some students are more efficient in the labomtory than others Therefore some would be able to complete more exper iments in a semester than others Also many of these experiments cannot be completed in one two hour laboratory period If space is available the circuits could be left intact from one period to the next Or you might want to select steps in an experiment that you want to delete Neither the val ues of the components or the magnitudes of the power supplies as given in the instructions are critical Therefore you could in most cases change them if the ones recommended are not available
