

Lab Exercise 11: DNA Biology and Technology

For this lab exercise, type all responses directly in this document and re-submit on Blackboard by the due date/time outlined in the online lab schedule.

Before beginning this lab, I suggest reviewing Lecture 10. This will help you all refresh your memory of DNA Replication and introduce the topics of Transcription and Translation. If you want to save time, have a look at the videos posted as supplementary material for Lecture 10!

Part I: DNA Replication. Answer the following questions regarding DNA Replication.

1. Number the following *general* steps of DNA replication in the correct order (1, 2, 3):

____ 2 ____ Daughter strands are formed using complementary base pairing.
 ____ 1 ____ Parent DNA strands unwind.
 ____ 3 ____ The DNA of the daughter strands winds together with its corresponding parent strand.

2. Which enzyme is responsible for the unwinding of the parental strands of DNA from the original DNA molecule by breaking the hydrogen bonds present between each nitrogenous base pair? (Hint: this enzyme unwinds the *helix*).

Helicase

3. Which group of enzymes are responsible for synthesizing DNA by linking nucleotides to a growing daughter strand of DNA as it follows complementary base-pairing rules?

DNA polymerase

4. Which enzyme is responsible for linking Okazaki fragments together in the lagging strand to form a single DNA strand?

DNA ligase

5. Complete the table on the following page. This table asks you to use complementary base pairing to copy 2 original DNA strands (separated from one parent DNA molecule) into two new DNA molecules!

Original DNA Strand 1	Original DNA Strand 2
