*Protection* C. Christopoulos,A. Wright,2013-04-18 The death of Professor Arthur Wright in the summer of 1996 deprived me  
of a friend and a colleague whose judgement and experience shaped this book I pay tribute to his contributions to protection  
and electrical engineering education In the five years since the first edition appeared many developments have taken place  
and it is now necessary to update the book The use of digital communications and advanced signal processing techniques is  
now widespread and several fully numeric relays are available from manu facturers Two new Chapters 13 and 14 have been  
added to introduce readers to these concepts and associated techniques Artificial intelligence is making its impact in all  
engineering applications and power system protection is no exception Expert systems fuzzy logic artificial neural networks  
adaptive and integrated protection synchronized measurements using the global positioning system genetic algorithms  
flexible a c transmission systems are some of the techniques considered in connection with protection Although many of  
these techniques have not yet found major application in protection it is nevertheless essential for the educated protection  
engineer to have a basic understanding of the underlying principles and methodology so that he or she can evaluate their  
suitability for new relaying problems and applications Chapter 15 was therefore added to guide readers through this  
developing area I have also added some new material in other chapters to reflect changes over the past years      **IEEE Std**
