sulfurcontaining fertilizers However the situation has changed in the last three decades Modern agriculture based on high crop yields intensive cropping improved crop varieties and greater use of sulfur free fertilizers and environmental regulations restricting sulfur emissions are creating large gaps between sulfur supply and sulfur requirements Sulfur deficiencies are widespread and growing Consequently the full potential of a modern agricultural system in tropical countries is not being realized This research effort results from the recognition of the seriousness of the sulfur problem and its adverse impact on food production as well as IFDC's dedication to the development and transfer of economically efficient fertilizer technology to tropical countries This study represents a comprehensive analysis of the technical and economic linkages between fertilizer sulfur and food production and it provides guidelines for future directions in fertilizer sulfur research and public policy
