systems with exchangeable component behavior languages The concepts are realized in a software architecture modeling infrastructure that comprises modeling languages to develop applications based on C C software architectures with exchangeable component behavior DSLs It supports transformations from platform independent to platform specific software architectures and compositional code generation With this it enables domain experts to re use the most appropriate component behavior DSL and facilitates composition of domain solutions through encapsulation in components **Political**

**Handbook and Atlas of the World** ,1970 **Modeling with UML** Bernhard Rumpe,2016-09-16 This book presents a variant of UML that is especially suitable for agile development of high quality software It adjusts the language UML profile called UML P for optimal assistance for the design implementation and agile evolution to facilitate its use especially in agile yet model based development methods for data intensive or control driven systems After a general introduction to UML and the choices made in the development of UML P in Chapter 1 Chapter 2 includes a definition of the language elements of class diagrams and their forms of use as views and representations Next Chapter 3 introduces the design and semantic facets of the Object Constraint Language OCL which is conceptually improved and syntactically adjusted to Java for better comfort Subsequently Chapter 4 introduces object diagrams as an independent exemplary notation in UML P and Chapter 5 offers a detailed introduction to UML P Statecharts Lastly Chapter 6 presents a simplified form of sequence diagrams for exemplary descriptions of object interactions For completeness appendixes A C describe the full syntax of UML P and appendix D explains a sample application from the E commerce domain which is used in all chapters This book is ideal for introductory courses for students and practitioners alike **Handbook of references** ,1951 *The English HandBook* Huy

**Cohomological Aspects in Complex Non-Kähler Geometry** Daniele Angella, 2013-11-22 In these notes we provide a summary of recent results on the cohomological properties of compact complex manifolds not endowed with a Kähler structure On the one hand the large number of developed analytic techniques makes it possible to prove strong cohomological properties for compact Kähler manifolds On the other in order to further investigate any of these properties it is natural to look for manifolds that do not have any Kähler structure We focus in particular on studying Bott Chern and Aeppli cohomologies of compact complex manifolds Several results concerning the computations of Dolbeault and Bott Chern cohomologies on nilmanifolds are summarized allowing readers to study explicit examples Manifolds endowed with almost complex structures or with other special structures such as for example symplectic generalized complex etc are also considered
